12.8 Coordinate Proofs
Maintaining Mathematical Proficiency

Using the Midpoint and Distance Formulas

Example 1  The endpoints of \(\overline{AB}\) are \(A(2, 3)\) and \(B(4, 7)\). Find the coordinates of the midpoint \(M\).

Use the Midpoint Formula.

\[
M\left(\frac{-2 + 4}{2}, \frac{3 + 7}{2}\right) = M\left(\frac{2}{2}, \frac{10}{2}\right) = M(1, 5)
\]

The coordinates of the midpoint \(M\) are \((1, 5)\).

Example 2  Find the distance between \(C(0, -5)\) and \(D(3, 2)\).

\[
\begin{align*}
CD &= \sqrt{(x_2 - x_1)^2 + (y_2 - y_1)^2} \\
&= \sqrt{(3 - 0)^2 + [2 - (-5)]^2} \\
&= \sqrt{9 + 49} \\
&= \sqrt{58} \\
&\approx 7.6
\end{align*}
\]

The distance between \(C(0, -5)\) and \(D(3, 2)\) is about 7.6.

Find the coordinates of the midpoint \(M\) of the segment with the given endpoints. Then find the distance between the two points.

1. \(P(-4, 1)\) and \(Q(0, 7)\)  
2. \(G(3, 6)\) and \(H(9, -2)\)  
3. \(U(-1, -2)\) and \(V(8, 0)\)

Solving Equations with Variables on Both Sides

Example 3  Solve \(2 - 5x = -3x\).

\[
\begin{align*}
2 - 5x &= -3x \\
+5x &+5x \\
2 &= 2x \\
\frac{2}{2} &= \frac{2x}{2} \\
1 &= x
\end{align*}
\]

The solution is \(x = 1\).

Solve the equation.

4. \(7x + 12 = 3x\)  
5. \(14 - 6t = t\)  
6. \(5p + 10 = 8p + 1\)  
7. \(w + 13 = 11w - 7\)  
8. \(4x + 1 = 3 - 2x\)  
9. \(z - 2 = 4 + 9z\)

10. ABSTRACT REASONING Is it possible to find the length of a segment in a coordinate plane without using the Distance Formula? Explain your reasoning.
Chapter 12  Congruent Triangles

Mathematical Practices
Mathematically proficient students understand and use given definitions.

Definitions, Postulates, and Theorems

Core Concept

Definitions and Biconditional Statements
A definition is always an “if and only if” statement. Here is an example.

Definition:  Two geometric figures are congruent figures if and only if there is a rigid motion or a composition of rigid motions that maps one of the figures onto the other.

Because this is a definition, it is a biconditional statement. It implies the following two conditional statements.

1. If two geometric figures are congruent figures, then there is a rigid motion or a composition of rigid motions that maps one of the figures onto the other.
2. If there is a rigid motion or a composition of rigid motions that maps one geometric figure onto another, then the two geometric figures are congruent figures.

Definitions, postulates, and theorems are the building blocks of geometry. In two-column proofs, the statements in the reason column are almost always definitions, postulates, or theorems.

Example 1  Identifying Definitions, Postulates, and Theorems
Classify each statement as a definition, a postulate, or a theorem.

a. If two lines are cut by a transversal so that alternate interior angles are congruent, then the lines are parallel.
b. If two coplanar lines have no point of intersection, then the lines are parallel.
c. If there is a line and a point not on the line, then there is exactly one line through the point parallel to the given line.

Solution
a. This is a theorem. It is the Alternate Interior Angles Converse Theorem studied in Section 10.3.
b. This is the definition of parallel lines.
c. This is a postulate. It is the Parallel Postulate studied in Section 10.1. In Euclidean geometry, it is assumed, not proved, to be true.

Monitoring Progress
Classify each statement as a definition, a postulate, or a theorem. Explain your reasoning.

1. In a coordinate plane, two nonvertical lines are perpendicular if and only if the product of their slopes is \(-1\).
2. If two lines intersect to form a linear pair of congruent angles, then the lines are perpendicular.
3. If two lines intersect to form a right angle, then the lines are perpendicular.
4. Through any two points, there exists exactly one line.
12.1 Angles of Triangles

**Essential Question** How are the angle measures of a triangle related?

**EXPLORATION 1** Writing a Conjecture

Work with a partner.

a. Use dynamic geometry software to draw any triangle and label it \( \triangle ABC \).

b. Find the measures of the interior angles of the triangle.

c. Find the sum of the interior angle measures.

d. Repeat parts (a)–(c) with several other triangles. Then write a conjecture about the sum of the measures of the interior angles of a triangle.

**Sample**

<table>
<thead>
<tr>
<th>Angles</th>
</tr>
</thead>
<tbody>
<tr>
<td>( m\angle A = 43.67^\circ )</td>
</tr>
<tr>
<td>( m\angle B = 81.87^\circ )</td>
</tr>
<tr>
<td>( m\angle C = 54.46^\circ )</td>
</tr>
</tbody>
</table>

**EXPLORATION 2** Writing a Conjecture

Work with a partner.

a. Use dynamic geometry software to draw any triangle and label it \( \triangle ABC \).

b. Draw an exterior angle at any vertex and find its measure.

c. Find the measures of the two nonadjacent interior angles of the triangle.

d. Find the sum of the measures of the two nonadjacent interior angles. Compare this sum to the measure of the exterior angle.

e. Repeat parts (a)–(d) with several other triangles. Then write a conjecture that compares the measure of an exterior angle with the sum of the measures of the two nonadjacent interior angles.

**Sample**

<table>
<thead>
<tr>
<th>Angles</th>
</tr>
</thead>
<tbody>
<tr>
<td>( m\angle A = 43.67^\circ )</td>
</tr>
<tr>
<td>( m\angle B = 81.87^\circ )</td>
</tr>
<tr>
<td>( m\angle ACD = 125.54^\circ )</td>
</tr>
</tbody>
</table>

**Communicate Your Answer**

3. How are the angle measures of a triangle related?

4. An exterior angle of a triangle measures 32°. What do you know about the measures of the interior angles? Explain your reasoning.
classify triangles by sides and angles.
find interior and exterior angle measures of triangles.

Classifying Triangles by Sides and by Angles
Recall that a triangle is a polygon with three sides. You can classify triangles by sides and by angles, as shown below.

**Core Concept**

**Classifying Triangles by Sides**

- **Scalene Triangle**
  - No congruent sides
- **Isosceles Triangle**
  - At least 2 congruent sides
- **Equilateral Triangle**
  - 3 congruent sides

**Classifying Triangles by Angles**

- **Acute Triangle**
  - 3 acute angles
- **Right Triangle**
  - 1 right angle
- **Obtuse Triangle**
  - 1 obtuse angle
- **Equiangular Triangle**
  - 3 congruent angles

EXAMPLE 1  Classifying Triangles by Sides and by Angles

Classify the triangular shape of the support beams in the diagram by its sides and by measuring its angles.

**SOLUTION**

The triangle has a pair of congruent sides, so it is isosceles. By measuring, the angles are $55^\circ$, $55^\circ$, and $70^\circ$.

- So, it is an acute isosceles triangle.

**Monitoring Progress**

1. Draw an obtuse isosceles triangle and an acute scalene triangle.
EXAMPLE 2  Classifying a Triangle in the Coordinate Plane

Classify \( \triangle OPQ \) by its sides. Then determine whether it is a right triangle.

SOLUTION

Step 1 Use the Distance Formula to find the side lengths.

\[ OP = \sqrt{(x_2 - x_1)^2 + (y_2 - y_1)^2} = \sqrt{(-1 - 0)^2 + (2 - 0)^2} = \sqrt{5} \approx 2.2 \]
\[ OQ = \sqrt{(x_2 - x_1)^2 + (y_2 - y_1)^2} = \sqrt{(6 - 0)^2 + (3 - 0)^2} = \sqrt{45} \approx 6.7 \]
\[ PQ = \sqrt{(x_2 - x_1)^2 + (y_2 - y_1)^2} = \sqrt{(6 - (-1))^2 + (3 - 2)^2} = \sqrt{50} \approx 7.1 \]

Because no sides are congruent, \( \triangle OPQ \) is a scalene triangle.

Step 2 Check for right angles. The slope of \( \overline{OP} \) is \( \frac{2}{-1} = -2 \). The slope of \( \overline{OQ} \) is \( \frac{3 - 0}{6 - 0} = \frac{1}{2} \). The product of the slopes is \( -2 \left( \frac{1}{2} \right) = -1 \). So, \( \overline{OP} \perp \overline{OQ} \) and \( \triangle POQ \) is a right angle.

So, \( \triangle OPQ \) is a right scalene triangle.

Monitoring Progress  Help in English and Spanish at BigIdeasMath.com

2. \( \triangle ABC \) has vertices \( A(0, 0) \), \( B(3, 3) \), and \( C(-3, 3) \). Classify the triangle by its sides. Then determine whether it is a right triangle.

Finding Angle Measures of Triangles

When the sides of a polygon are extended, other angles are formed. The original angles are the **interior angles**. The angles that form linear pairs with the interior angles are the **exterior angles**.

**Theorem**

**Triangle Sum Theorem**

The sum of the measures of the interior angles of a triangle is 180°.

**Proof** p. 590; Ex. 53, p. 594

\[ m\angle A + m\angle B + m\angle C = 180^\circ \]
To prove certain theorems, you may need to add a line, a segment, or a ray to a given diagram. An auxiliary line is used in the proof of the Triangle Sum Theorem.

### Triangle Sum Theorem

**Given** \( \triangle ABC \)

**Prove** \( m\angle 1 + m\angle 2 + m\angle 3 = 180^\circ \)

**Plan for Proof**

1. **Draw an auxiliary line through B that is parallel to AC.**
2. Show that \( m\angle 4 + m\angle 2 + m\angle 5 = 180^\circ \), \( \angle 1 \cong \angle 4 \), and \( \angle 3 \cong \angle 5 \).
3. By substitution, \( m\angle 1 + m\angle 2 + m\angle 3 = 180^\circ \).

**Statements**

1. **Draw** \( \overline{BD} \) parallel to \( \overline{AC} \).
2. \( m\angle 4 + m\angle 2 + m\angle 5 = 180^\circ \)
3. \( \angle 1 \cong \angle 4 \), \( \angle 3 \cong \angle 5 \)
4. \( m\angle 1 = m\angle 4 \), \( m\angle 3 = m\angle 5 \)
5. \( m\angle 1 + m\angle 2 + m\angle 3 = 180^\circ \)

**Reasons**

1. Parallel Postulate
2. Angle Addition Postulate and definition of straight angle
3. Alternate Interior Angles Theorem
4. Definition of congruent angles
5. Substitution Property of Equality

### Exterior Angle Theorem

The measure of an exterior angle of a triangle is equal to the sum of the measures of the two nonadjacent interior angles.

**Proof** Ex. 42, p. 593

\[ m\angle 1 = m\angle A + m\angle B \]

### Example 3

**Finding an Angle Measure**

Find \( m\angle JKM \).

**Solution**

1. **Write and solve an equation to find the value of** \( x \).
   \[
   (2x - 5)^\circ = 70^\circ + x^\circ 
   \]
   \[
   x = 75 
   \]

2. **Substitute 75 for** \( x \) **in** \( 2x - 5 \) **to find** \( m\angle JKM \).
   \[
   2x - 5 = 2 \cdot 75 - 5 = 145 
   \]
   
   So, the measure of \( \angle JKM \) is \( 145^\circ \).
A **corollary to a theorem** is a statement that can be proved easily using the theorem. The corollary below follows from the Triangle Sum Theorem.

### Corollary

**Corollary to the Triangle Sum Theorem**

The acute angles of a right triangle are complementary.

![Diagram of a right triangle with labels](image)

Proof Ex. 41, p. 593

### EXAMPLE 4 Modeling with Mathematics

In the painting, the red triangle is a right triangle. The measure of one acute angle in the triangle is twice the measure of the other. Find the measure of each acute angle.

**SOLUTION**

1. **Understand the Problem** You are given a right triangle and the relationship between the two acute angles in the triangle. You need to find the measure of each acute angle.

2. **Make a Plan** First, sketch a diagram of the situation. You can use the Corollary to the Triangle Sum Theorem and the given relationship between the two acute angles to write and solve an equation to find the measure of each acute angle.

3. **Solve the Problem** Let the measure of the smaller acute angle be \(x\)°. Then the measure of the larger acute angle is \(2x\)°. The Corollary to the Triangle Sum Theorem states that the acute angles of a right triangle are complementary. Use the corollary to set up and solve an equation.

\[
x° + 2x° = 90°
\]

**Corollary to the Triangle Sum Theorem**

\[
x = 30
\]

**Solve for \(x\).**

So, the measures of the acute angles are \(30°\) and \(2(30°) = 60°\).

4. **Look Back** Add the two angles and check that their sum satisfies the Corollary to the Triangle Sum Theorem.

\[
30° + 60° = 90°
\]

**Monitoring Progress**

3. Find the measure of \(\angle 1\).

4. Find the measure of each acute angle.
12.1 Exercises  

Vocabulary and Core Concept Check

1. **WRITING** Can a right triangle also be obtuse? Explain your reasoning.

2. **COMPLETE THE SENTENCE** The measure of an exterior angle of a triangle is equal to the sum of the measures of the two __________ interior angles.

Monitoring Progress and Modeling with Mathematics

In Exercises 3–6, classify the triangle by its sides and by measuring its angles. *(See Example 1.)*

3. \( \triangle XYZ \)

4. \( \triangle LMN \)

5. \( \triangle JKH \)

6. \( \triangle ABC \)

In Exercises 7–10, classify \( \triangle ABC \) by its sides. Then determine whether it is a right triangle. *(See Example 2.)*

7. \( A(2, 3), B(6, 3), C(2, 7) \)

8. \( A(3, 3), B(6, 9), C(6, -3) \)

9. \( A(1, 9), B(4, 8), C(2, 5) \)

10. \( A(-2, 3), B(0, -3), C(3, -2) \)

In Exercises 11–14, find \( m\angle 1 \). Then classify the triangle by its angles.

11. \( \triangle \)

12. \( \triangle \)

13. \( \triangle \)

14. \( \triangle \)

In Exercises 15–18, find the measure of the exterior angle. *(See Example 3.)*

15. \( \triangle \)

16. \( \triangle \)

17. \( \triangle \)

18. \( \triangle \)

In Exercises 19–22, find the measure of each acute angle. *(See Example 4.)*

19. \( \triangle \)

20. \( \triangle \)

21. \( \triangle \)

22. \( \triangle \)

592 Chapter 12 Congruent Triangles
In Exercises 23–26, find the measure of each acute angle in the right triangle. (See Example 4.)

23. The measure of one acute angle is 5 times the measure of the other acute angle.

24. The measure of one acute angle is 8 times the measure of the other acute angle.

25. The measure of one acute angle is 3 times the sum of the measure of the other acute angle and 8.

26. The measure of one acute angle is twice the difference of the measure of the other acute angle and 12.

ERROR ANALYSIS In Exercises 27 and 28, describe and correct the error in finding $m\angle 1$.

27. $115^\circ + 39^\circ + m\angle 1 = 360^\circ$

28. $m\angle 1 + 80^\circ + 50^\circ = 180^\circ$

In Exercises 29–36, find the measure of the numbered angle.

29. $\angle 1$

30. $\angle 2$

31. $\angle 3$

32. $\angle 4$

33. $\angle 5$

34. $\angle 6$

35. $\angle 7$

36. $\angle 8$

37. USING TOOLS Three people are standing on a stage. The distances between the three people are shown in the diagram. Classify the triangle by its sides and by measuring its angles.

38. USING STRUCTURE Which of the following sets of angle measures could form a triangle? Select all that apply.

A. $100^\circ, 50^\circ, 40^\circ$

B. $96^\circ, 74^\circ, 10^\circ$

C. $165^\circ, 113^\circ, 82^\circ$

D. $101^\circ, 41^\circ, 38^\circ$

E. $90^\circ, 45^\circ, 45^\circ$

F. $84^\circ, 62^\circ, 34^\circ$

39. MODELING WITH MATHEMATICS You are bending a strip of metal into an isosceles triangle for a sculpture. The strip of metal is 20 inches long. The first bend is made 6 inches from one end. Describe two ways you could complete the triangle.

40. THOUGHT PROVOKING Find and draw an object (or part of an object) that can be modeled by a triangle and an exterior angle. Describe the relationship between the interior angles of the triangle and the exterior angle in terms of the object.

41. PROVING A COROLLARY Prove the Corollary to the Triangle Sum Theorem.

Given $\triangle ABC$ is a right triangle.

Prove $\angle A$ and $\angle B$ are complementary.

42. PROVING A THEOREM Prove the Exterior Angle Theorem.

Given $\triangle ABC$, exterior $\angle BCD$

Prove $m\angle A + m\angle B = m\angle BCD$
43. **CRITICAL THINKING** Is it possible to draw an obtuse isosceles triangle? obtuse equilateral triangle? If so, provide examples. If not, explain why it is not possible.

44. **CRITICAL THINKING** Is it possible to draw a right isosceles triangle? right equilateral triangle? If so, provide an example. If not, explain why it is not possible.

45. **MATHEMATICAL CONNECTIONS** \(\triangle ABC\) is isosceles, \(AB = x\), and \(BC = 2x - 4\).
   a. Find two possible values for \(x\) when the perimeter of \(\triangle ABC\) is 32.
   b. How many possible values are there for \(x\) when the perimeter of \(\triangle ABC\) is 12?

46. **HOW DO YOU SEE IT?** Classify the triangles, in as many ways as possible, without finding any measurements.
   a. 
   b. 
   c. 
   d. 

47. **ANALYZING RELATIONSHIPS** Which of the following could represent the measures of an exterior angle and two interior angles of a triangle? Select all that apply.
   - A 100°, 62°, 38°
   - B 81°, 57°, 24°
   - C 119°, 68°, 49°
   - D 95°, 85°, 28°
   - E 92°, 78°, 68°
   - F 149°, 101°, 48°

48. **MAKING AN ARGUMENT** Your friend claims the measure of an exterior angle will always be greater than the sum of the nonadjacent interior angle measures. Is your friend correct? Explain your reasoning.

49. **MATHEMATICAL CONNECTIONS** In Exercises 49–52, find the values of \(x\) and \(y\).

50. 

51. 

52. 

53. **PROVING A THEOREM** Use the diagram to write a proof of the Triangle Sum Theorem. Your proof should be different from the proof of the Triangle Sum Theorem shown in this lesson.

54. \(m \angle KHL\)

55. \(m \angle ABC\)

56. \(GH\)

57. \(BC\)

---

**Maintaining Mathematical Proficiency**

Use the diagram to find the measure of the segment or angle. *(Section 8.2 and Section 8.5)*

54. \(m \angle KHL\)

55. \(m \angle ABC\)

56. \(GH\)

57. \(BC\)
12.2 Congruent Polygons

**Essential Question**  Given two congruent triangles, how can you use rigid motions to map one triangle to the other triangle?

**EXPLORATION 1** Describing Rigid Motions

Work with a partner. Of the three transformations you studied in Chapter 11, which are rigid motions? Under a rigid motion, why is the image of a triangle always congruent to the original triangle? Explain your reasoning.

**EXPLORATION 2** Finding a Composition of Rigid Motions

Work with a partner. Describe a composition of rigid motions that maps \( \triangle ABC \) to \( \triangle DEF \). Use dynamic geometry software to verify your answer.

a. \( \triangle ABC \cong \triangle DEF \)

b. \( \triangle ABC \cong \triangle DEF \)

c. \( \triangle ABC \cong \triangle DEF \)

d. \( \triangle ABC \cong \triangle DEF \)

**Communicate Your Answer**

3. Given two congruent triangles, how can you use rigid motions to map one triangle to the other triangle?

4. The vertices of \( \triangle ABC \) are \( A(1, 1), B(3, 2), \) and \( C(4, 4) \). The vertices of \( \triangle DEF \) are \( D(2, -1), E(0, 0), \) and \( F(-1, 2) \). Describe a composition of rigid motions that maps \( \triangle ABC \) to \( \triangle DEF \).
What You Will Learn

- Identify and use corresponding parts.
- Use the Third Angles Theorem.

Identifying and Using Corresponding Parts

Recall that two geometric figures are congruent if and only if a rigid motion or a composition of rigid motions maps one of the figures onto the other. A rigid motion maps each part of a figure to a corresponding part of its image. Because rigid motions preserve length and angle measure, corresponding parts of congruent figures are congruent. In congruent polygons, this means that the corresponding sides and the corresponding angles are congruent.

When \( \triangle DEF \) is the image of \( \triangle ABC \) after a rigid motion or a composition of rigid motions, you can write congruence statements for the corresponding angles and corresponding sides.

Identifying Corresponding Parts

Write a congruence statement for the triangles. Identify all pairs of congruent corresponding parts.

**SOLUTION**

The diagram indicates that \( \triangle JKL \equiv \triangle TSR \).

**Corresponding angles** \( \angle J \equiv \angle T, \angle K \equiv \angle S, \angle L \equiv \angle R \)

**Corresponding sides** \( JK \equiv TS, KL \equiv SR, LJ \equiv RT \)
EXAMPLE 2  Using Properties of Congruent Figures

In the diagram, \( \triangle DEF \cong \triangle SPQR \).

a. Find the value of \( x \).

b. Find the value of \( y \).

**SOLUTION**

a. You know that \( \overline{FG} \cong \overline{QR} \).

\[
FG = QR \\
12 = 2x - 4 \\
16 = 2x \\
8 = x
\]

b. You know that \( \angle F \cong \angle Q \).

\[
m\angle F = m\angle Q \\
68° = (6y + x)° \\
68 = 6y + 8 \\
10 = y
\]

EXAMPLE 3  Showing That Figures Are Congruent

You divide the wall into orange and blue sections along \( \overline{JK} \). Will the sections of the wall be the same size and shape? Explain.

**SOLUTION**

From the diagram, \( \angle A \cong \angle C \) and \( \angle D \cong \angle B \) because all right angles are congruent. Also, by the Lines Perpendicular to a Transversal Theorem, \( \overline{AB} \parallel \overline{DC} \). Then \( \angle 1 \cong \angle 4 \) and \( \angle 2 \cong \angle 3 \) by the Alternate Interior Angles Theorem. So, all pairs of corresponding angles are congruent. The diagram shows \( \overline{AJ} \cong \overline{CK}, \overline{KD} \cong \overline{JB}, \) and \( \overline{DA} \cong \overline{BC} \). By the Reflexive Property of Congruence, \( \overline{JK} \cong \overline{KJ} \). So, all pairs of corresponding sides are congruent. Because all corresponding parts are congruent, \( \triangle AJKD \cong \triangle CKJB \).

Yes, the two sections will be the same size and shape.

**Monitoring Progress**

Help in English and Spanish at BigIdeasMath.com

In the diagram, \( \triangle ABGH \cong \triangle CDEF \).

1. Identify all pairs of congruent corresponding parts.
2. Find the value of \( x \).
3. In the diagram at the left, show that \( \triangle PTS \cong \triangle RTQ \).

**Theorem**

Properties of Triangle Congruence

Triangle congruence is reflexive, symmetric, and transitive.

**Reflexive** For any triangle \( \triangle ABC \), \( \triangle ABC \cong \triangle ABC \).

**Symmetric** If \( \triangle ABC \cong \triangle DEF \), then \( \triangle DEF \cong \triangle ABC \).

**Transitive** If \( \triangle ABC \cong \triangle DEF \) and \( \triangle DEF \cong \triangle JKL \), then \( \triangle ABC \cong \triangle JKL \).

*Proof* BigIdeasMath.com
Using the Third Angles Theorem

**Theorem**

**Third Angles Theorem**
If two angles of one triangle are congruent to two angles of another triangle, then the third angles are also congruent.

*Proof* Ex. 19, p. 600

If \( \angle A \cong \angle D \) and \( \angle B \cong \angle E \), then \( \angle C \cong \angle F \).

**Example 4**

Using the Third Angles Theorem

Find \( m\angle BDC \).

**SOLUTION**

\( \angle A \cong \angle B \) and \( \angle ADC \cong \angle BCD \), so by the Third Angles Theorem, \( \angle ACD \cong \angle BDC \).

By the Triangle Sum Theorem, \( m\angle ACD = 180^\circ - 45^\circ - 30^\circ = 105^\circ \).

So, \( m\angle BDC = m\angle ACD = 105^\circ \) by the definition of congruent angles.

**Example 5**

Proving That Triangles Are Congruent

Use the information in the figure to prove that \( \triangle ACD \cong \triangle CAB \).

**SOLUTION**

Given \( \overline{AD} \cong \overline{CB}, \overline{DC} \cong \overline{BA}, \angle ACD \cong \angle CAB, \angle CAD \cong \angle ACB \)

Prove \( \triangle ACD \cong \triangle CAB \)

**Plan for Proof**

a. Use the Reflexive Property of Congruence to show that \( \overline{AC} \cong \overline{CA} \).

b. Use the Third Angles Theorem to show that \( \angle B \cong \angle D \).

**STATEMENTS**

5. What additional information is needed to conclude that \( \triangle NDC \equiv \triangle NSR \)?
12.2 Exercises

Vocabulary and Core Concept Check

1. **WRITING** Based on this lesson, what information do you need to prove that two triangles are congruent? Explain your reasoning.

2. **DIFFERENT WORDS, SAME QUESTION** Which is different? Find “both” answers.
   
   - Is \( \triangle JKL \equiv \triangle STR \)?
   - Is \( \triangle KJL \equiv \triangle SRT \)?
   - Is \( \triangle JLK \equiv \triangle STR \)?
   - Is \( \triangle LJK \equiv \triangle TSR \)?

---

Monitoring Progress and Modeling with Mathematics

In Exercises 3 and 4, identify all pairs of congruent corresponding parts. Then write another congruence statement for the polygons. (See Example 1.)

3. \( \triangle ABC \equiv \triangle DEF \)

4. \( \triangle GHJ \equiv \triangle RST \)

In Exercises 5–8, \( \triangle XYZ \equiv \triangle MNL \). Copy and complete the statement.

5. \( m\angle Y = \)____

6. \( m\angle M = \)____

7. \( m\angle Z = \)____

8. \( XY = \)____

In Exercises 9 and 10, find the values of \( x \) and \( y \). (See Example 2.)

9. \( \triangle ABC \equiv \triangle EFGH \)

10. \( \triangle MNP \equiv \triangle TUS \)

In Exercises 11 and 12, show that the polygons are congruent. Explain your reasoning. (See Example 3.)

11.

12.

In Exercises 13 and 14, find \( m\angle 1 \). (See Example 4.)

13.

14.
15. **PROOF** Triangular postage stamps, like the ones shown, are highly valued by stamp collectors. Prove that \( \triangle AEB \cong \triangle CED \). (See Example 5.)

Given \( AB \parallel DC, AB \equiv DC, E \) is the midpoint of \( AC \) and \( BD \).

Prove \( \triangle AEB \cong \triangle CED \)

16. **PROOF** Use the information in the figure to prove that \( \triangle ABE \cong \triangle DCF \).

17. **ERROR ANALYSIS** In Exercises 17 and 18, describe and correct the error.

18. **ERROR ANALYSIS** In Exercises 17 and 18, describe and correct the error.

19. **PROVING A THEOREM** Prove the Third Angles Theorem by using the Triangle Sum Theorem.

20. **THOUGHT PROVOKING** Draw a triangle. Copy the triangle multiple times to create a rug design made of congruent triangles. Which property guarantees that all the triangles are congruent?

21. **REASONING** \( \triangle JKL \) is congruent to \( \triangle XYZ \). Identify all pairs of congruent corresponding parts.

22. **HOW DO YOU SEE IT?** In the diagram, \( AB \parallel EF \).

a. Explain how you know that \( BE \equiv DE \) and \( \angle ABE \equiv \angle CDE \).

b. Explain how you know that \( \angle GBE \equiv \angle GDE \).

c. Explain how you know that \( \angle GEB \equiv \angle GED \).

d. Do you have enough information to prove that \( \triangle BEG \equiv \triangle DEG \)? Explain.

23. **MATHEMATICAL CONNECTIONS** In Exercises 23 and 24, use the given information to write and solve a system of linear equations to find the values of \( x \) and \( y \).

24. **MATHEMATICAL CONNECTIONS** In Exercises 23 and 24, use the given information to write and solve a system of linear equations to find the values of \( x \) and \( y \).

25. **PROOF** Prove that the criteria for congruent triangles in this lesson is equivalent to the definition of congruence in terms of rigid motions.

26. **MAINTAINING MATHEMATICAL PROFICIENCY** Reviewing what you learned in previous grades and lessons

What can you conclude from the diagram? (Section 8.6)

27. **MAINTAINING MATHEMATICAL PROFICIENCY** Reviewing what you learned in previous grades and lessons

28. **MAINTAINING MATHEMATICAL PROFICIENCY** Reviewing what you learned in previous grades and lessons

29. **MAINTAINING MATHEMATICAL PROFICIENCY** Reviewing what you learned in previous grades and lessons

600 Chapter 12 Congruent Triangles
12.3 Proving Triangle Congruence by SAS

**Essential Question** What can you conclude about two triangles when you know that two pairs of corresponding sides and the corresponding included angles are congruent?

**EXPLORATION 1** Drawing Triangles

*Work with a partner.* Use dynamic geometry software.

a. Construct circles with radii of 2 units and 3 units centered at the origin. Construct a 40° angle with its vertex at the origin. Label the vertex A.

b. Locate the point where one ray of the angle intersects the smaller circle and label this point B. Locate the point where the other ray of the angle intersects the larger circle and label this point C. Then draw \(\triangle ABC\).

c. Find \(BC\), \(m\angle B\), and \(m\angle C\).

d. Repeat parts (a)–(c) several times, redrawing the angle in different positions. Keep track of your results by copying and completing the table below. What can you conclude?

**Communicate Your Answer**

2. What can you conclude about two triangles when you know that two pairs of corresponding sides and the corresponding included angles are congruent?

3. How would you prove your conclusion in Exploration 1(d)?
What You Will Learn

- Use the Side-Angle-Side (SAS) Congruence Theorem.
- Solve real-life problems.

Using the Side-Angle-Side Congruence Theorem

**Side-Angle-Side (SAS) Congruence Theorem**

If two sides and the included angle of one triangle are congruent to two sides and the included angle of a second triangle, then the two triangles are congruent.

If \( \overline{AB} \equiv \overline{DE}, \angle A \equiv \angle D, \) and \( \overline{AC} \equiv \overline{DF}, \) then \( \triangle ABC \equiv \triangle DEF. \)

**Proof** p. 602

---

**PROOF** Side-Angle-Side (SAS) Congruence Theorem

Given \( \overline{AB} \equiv \overline{DE}, \angle A \equiv \angle D, \overline{AC} \equiv \overline{DF} \)

Prove \( \triangle ABC \equiv \triangle DEF \)

First, translate \( \triangle ABC \) so that point \( A \) maps to point \( D \), as shown below.

![Translation Diagram]

This translation maps \( \triangle ABC \) to \( \triangle DB'C' \). Next, rotate \( \triangle DB'C' \) counterclockwise through \( \angle C'DF \) so that the image of \( DC' \) coincides with \( DF \), as shown below.

![Rotation Diagram]

Because \( \overline{DC'} \equiv \overline{DF} \), the rotation maps point \( C' \) to point \( F \). So, this rotation maps \( \triangle DB'C' \) to \( \triangle DB''F \). Now, reflect \( \triangle DB''F \) in the line through points \( D \) and \( F \), as shown below.

![Reflection Diagram]

Because points \( D \) and \( F \) lie on \( \overline{DF} \), this reflection maps them onto themselves. Because a reflection preserves angle measure and \( \angle B''DF \equiv \angle EDF \), the reflection maps \( \overline{DB''} \) to \( \overline{DE} \). Because \( \overline{DB''} \equiv \overline{DE} \), the reflection maps point \( B'' \) to point \( E \). So, this reflection maps \( \triangle DB''F \) to \( \triangle DEF \).

Because you can map \( \triangle ABC \) to \( \triangle DEF \) using a composition of rigid motions, \( \triangle ABC \equiv \triangle DEF \).
EXAMPLE 1 Using the SAS Congruence Theorem

Write a proof.

**Given** \( BC \cong DA, \overline{BC} \parallel \overline{AD} \)

**Prove** \( \triangle ABC \cong \triangle CDA \)

**SOLUTION**

<table>
<thead>
<tr>
<th>STATEMENTS</th>
<th>REASONS</th>
</tr>
</thead>
<tbody>
<tr>
<td>1. ( \overline{BC} \cong \overline{DA} )</td>
<td>1. Given</td>
</tr>

<td>2. Given</td>
</tr>
<tr>
<td>3. ( \angle BCA \cong \angle DAC )</td>
<td>3. Alternate Interior Angles Theorem</td>
</tr>
<tr>
<td>4. ( \overline{AC} \cong \overline{CA} )</td>
<td>4. Reflexive Property of Congruence</td>
</tr>
<tr>
<td>5. ( \triangle ABC \cong \triangle CDA )</td>
<td>5. SAS Congruence Theorem</td>
</tr>
</tbody>
</table>

EXAMPLE 2 Using SAS and Properties of Shapes

In the diagram, \( QS \) and \( RP \) pass through the center \( M \) of the circle. What can you conclude about \( \triangle MRS \) and \( \triangle MPQ \)?

**SOLUTION**

Because they are vertical angles, \( \angle PMQ \cong \angle RMS \). All points on a circle are the same distance from the center, so \( \overline{MP}, \overline{MQ}, \overline{MR}, \) and \( \overline{MS} \) are all congruent.

So, \( \triangle MRS \) and \( \triangle MPQ \) are congruent by the SAS Congruence Theorem.

**Monitoring Progress**

In the diagram, \( ABCD \) is a square with four congruent sides and four right angles. \( R, S, T, \) and \( U \) are the midpoints of the sides of \( ABCD \). Also, \( RT \perp SU \) and \( SV \equiv VU \).

1. Prove that \( \triangle SVR \cong \triangle UVR \).
2. Prove that \( \triangle BSR \cong \triangle DUT \).
CONSTRUCTION

Copy a Triangle Using SAS

Construct a triangle that is congruent to $\triangle ABC$ using the SAS Congruence Theorem. Use a compass and straightedge.

SOLUTION

Step 1
- Construct a side $DE$ so that it is congruent to $\overline{AB}$.

Step 2
- Construct an angle $\angle D$ with vertex $D$ and side $DE$ so that it is congruent to $\angle A$.

Step 3
- Construct a side $DF$ so that it is congruent to $\overline{AC}$.

Step 4
- Draw a triangle $\triangle DEF$. By the SAS Congruence Theorem, $\triangle ABC \cong \triangle DEF$.

Solving Real-Life Problems

EXAMPLE 3

Solving a Real-Life Problem

You are making a canvas sign to hang on the triangular portion of the barn wall shown in the picture. You think you can use two identical triangular sheets of canvas. You know that $\overline{RP} \perp \overline{QS}$ and $\overline{PQ} \cong \overline{PS}$. Use the SAS Congruence Theorem to show that $\triangle PQR \cong \triangle PSR$.

SOLUTION

You are given that $\overline{PQ} \cong \overline{PS}$. By the Reflexive Property of Congruence, $\overline{RP} \cong \overline{RP}$. By the definition of perpendicular lines, both $\angle RPQ$ and $\angle RPS$ are right angles, so they are congruent. So, two pairs of sides and their included angles are congruent.

$\triangle PQR$ and $\triangle PSR$ are congruent by the SAS Congruence Theorem.

Monitoring Progress

Help in English and Spanish at BigIdeasMath.com

3. You are designing the window shown in the photo. You want to make $\triangle DRA$ congruent to $\triangle DRG$. You design the window so that $\overline{DA} \cong \overline{DG}$ and $\angle ADR \cong \angle GDR$. Use the SAS Congruence Theorem to prove $\triangle DRA \cong \triangle DRG$.

f. Write the converse of the conjecture you wrote in part (e). Is the converse true?

Communicate Your Answer

2. What conjectures can you make about the side lengths and angle measures of an isosceles triangle?

3. How would you prove your conclusion in Exploration 1(e)? in Exploration 1(f)?
12.4 Lesson

What You Will Learn

- Use the Base Angles Theorem.
- Use isosceles and equilateral triangles.

Core Vocabulary

legs, p. 608  
vertex angle, p. 608  
base, p. 608  
base angles, p. 608

Using the Base Angles Theorem

A triangle is isosceles when it has at least two congruent sides. When an isosceles triangle has exactly two congruent sides, these two sides are the legs. The angle formed by the legs is the vertex angle. The third side is the base of the isosceles triangle. The two angles adjacent to the base are called base angles.

Theorems

Base Angles Theorem

If two sides of a triangle are congruent, then the angles opposite them are congruent.

If \( AB \cong AC \), then \( \angle B \cong \angle C \).

Proof p. 608

Converse of the Base Angles Theorem

If two angles of a triangle are congruent, then the sides opposite them are congruent.

If \( \angle B \cong \angle C \), then \( AB \cong AC \).

Proof Ex. 27, p. 631

PROOF Base Angles Theorem

Given \( AB \cong AC \)

Prove \( \angle B \cong \angle C \)

Plan for Proof

a. Draw \( AD \) so that it bisects \( \angle CAB \).
b. Use the SAS Congruence Theorem to show that \( \triangle ADB \cong \triangle ADC \).
c. Use properties of congruent triangles to show that \( \angle B \cong \angle C \).

<table>
<thead>
<tr>
<th>PLAN IN ACTION</th>

608 Chapter 12 Congruent Triangles
Section 12.4  Equilateral and Isosceles Triangles  609

**EXAMPLE 1**  Using the Base Angles Theorem

In \( \triangle DEF \), \( DE \equiv DF \). Name two congruent angles.

**SOLUTION**

\( DE \equiv DF \), so by the Base Angles Theorem, \( \angle E \equiv \angle F \).

**Monitoring Progress**  Help in English and Spanish at BigIdeasMath.com

Copy and complete the statement.

1. If \( HG \equiv HK \), then \( \angle \equiv \angle \).
2. If \( \angle KHJ \equiv \angle KJH \), then \( \angle \equiv \angle \).

Recall that an equilateral triangle has three congruent sides.

**Corollaries**

**Corollary to the Base Angles Theorem**

If a triangle is equilateral, then it is equiangular.

**Proof**  Ex. 37, p. 614

**Corollary to the Converse of the Base Angles Theorem**

If a triangle is equiangular, then it is equilateral.

**Proof**  Ex. 39, p. 614

**EXAMPLE 2**  Finding Measures in a Triangle

Find the measures of \( \angle P \), \( \angle Q \), and \( \angle R \).

**SOLUTION**

The diagram shows that \( \triangle PQR \) is equilateral. So, by the Corollary to the Base Angles Theorem, \( \triangle PQR \) is equiangular. So, \( m\angle P = m\angle Q = m\angle R \).

\[
3(m\angle P) = 180^\circ \quad \text{Triangle Sum Theorem}
\]

\[
m\angle P = 60^\circ \quad \text{Divide each side by 3.}
\]

\( \angle P \), \( \angle Q \), and \( \angle R \) are all \( 60^\circ \).

**Monitoring Progress**  Help in English and Spanish at BigIdeasMath.com

3. Find the length of \( ST \) for the triangle at the left.
Using Isosceles and Equilateral Triangles

CONSTRUCTION  Constructing an Equilateral Triangle

Construct an equilateral triangle that has side lengths congruent to $AB$. Use a compass and straightedge.

**SOLUTION**

**Step 1**  
Copy a segment  
Copy $AB$.

**Step 2**  
Draw an arc  
Draw an arc with center $A$ and radius $AB$.

**Step 3**  
Draw an arc  
Draw an arc with center $B$ and radius $AB$. Label the intersection of the arcs from Steps 2 and 3 as $C$.

**Step 4**  
Draw a triangle  
Draw $\triangle ABC$. Because $\overline{AB}$ and $\overline{AC}$ are radii of the same circle, $\overline{AB} \equiv \overline{AC}$. Because $\overline{AB}$ and $\overline{BC}$ are radii of the same circle, $\overline{AB} \equiv \overline{BC}$. By the Transitive Property of Congruence, $\overline{AC} \equiv \overline{BC}$. So, $\triangle ABC$ is equilateral.

**EXAMPLE 3**  
Using Isosceles and Equilateral Triangles

Find the values of $x$ and $y$ in the diagram.

**COMMON ERROR**  
You cannot use $N$ to refer to $\angle LNM$ because three angles have $N$ as their vertex.

**SOLUTION**

**Step 1**  
Find the value of $y$. Because $\triangle KLN$ is equiangular, it is also equilateral and $KN \equiv KL$. So, $y = 4$.

**Step 2**  
Find the value of $x$. Because $\angle LNM \equiv \angle LMN$, $\overline{LN} \equiv \overline{LM}$, and $\angle LMN$ is isosceles. You also know that $LN = 4$ because $\triangle KLN$ is equilateral.

$$LN = LM \quad \text{Definition of congruent segments}$$

$$4 = x + 1 \quad \text{Substitute 4 for } LN \text{ and } x + 1 \text{ for } LM.$$ 

$$3 = x \quad \text{Subtract 1 from each side.}$$

610  Chapter 12  Congruent Triangles
EXAMPLE 4  Solving a Multi-Step Problem

In the lifeguard tower, \( PS \equiv QR \) and \( \angle QPS \equiv \angle PQR \).

a. Explain how to prove that \( \triangle QPS \cong \triangle PQR \).
b. Explain why \( \triangle PQT \) is isosceles.

**SOLUTION**

a. Draw and label \( \triangle QPS \) and \( \triangle PQR \) so that they do not overlap. You can see that \( PQ \equiv PQ \), \( PS \equiv QR \), and \( \angle QPS \equiv \angle PQR \). So, by the SAS Congruence Theorem, \( \triangle QPS \cong \triangle PQR \).

b. From part (a), you know that \( \angle 1 \equiv \angle 2 \) because corresponding parts of congruent triangles are congruent. By the Converse of the Base Angles Theorem, \( PT \equiv QT \), and \( \triangle PQT \) is isosceles.

**COMMON ERROR**

When you redraw the triangles so that they do not overlap, be careful to copy all given information and labels correctly.

**Monitoring Progress**

4. Find the values of \( x \) and \( y \) in the diagram.

5. In Example 4, show that \( \triangle PTS \cong \triangle QTR \).

Section 12.4  Equilateral and Isosceles Triangles  611
1. **VOCABULARY** Describe how to identify the vertex angle of an isosceles triangle.

2. **WRITING** What is the relationship between the base angles of an isosceles triangle? Explain.

### Monitoring Progress and Modeling with Mathematics

In Exercises 3–6, copy and complete the statement. State which theorem you used. (See Example 1.)

3. If $\overline{AE} \cong \overline{DE}$, then $\angle$ __ $\cong$ __.

4. If $\overline{AB} \cong \overline{EB}$, then $\angle$ __ $\cong$ __.

5. If $\angle D \cong \angle CED$, then ___ $\cong$ ___.

6. If $\angle EBC \cong \angle ECB$, then ___ $\cong$ ___.

In Exercises 7–10, find the value of $x$. (See Example 2.)

7. $\angle A \cong 12$

8. $\angle M \cong 60^\circ$

9. $\angle S$

10. $\angle E$

11. **MODELING WITH MATHEMATICS** The dimensions of a sports pennant are given in the diagram. Find the values of $x$ and $y$.

12. **MODELING WITH MATHEMATICS** A logo in an advertisement is an equilateral triangle with a side length of 7 centimeters. Sketch the logo and give the measure of each side.

In Exercises 13–16, find the values of $x$ and $y$. (See Example 3.)

13. $\triangle x$

14. $\triangle y$

15. $\triangle 8y$

16. $\triangle 3x - 5$

### CONSTRUCTION

In Exercises 17 and 18, construct an equilateral triangle whose sides are the given length.

17. 3 inches

18. 1.25 inches

19. **ERROR ANALYSIS** Describe and correct the error in finding the length of $BC$.

**Because $\angle A \cong \angle C$, $\overline{AC} \cong \overline{BC}$. So, $BC = 6$.**
20. **PROBLEM SOLVING**
The diagram represents part of the exterior of the Bow Tower in Calgary, Alberta, Canada. In the diagram, \( \triangle ABD \) and \( \triangle CBD \) are congruent equilateral triangles. (See Example 4.)

a. Explain why \( \triangle ABC \) is isosceles.

b. Explain why \( \angle BAE \cong \angle BCE \).

c. Show that \( \triangle ABE \) and \( \triangle CBE \) are congruent.

d. Find the measure of \( \angle BAE \).

21. **FINDING A PATTERN** In the pattern shown, each small triangle is an equilateral triangle with an area of 1 square unit.

<table>
<thead>
<tr>
<th>Triangle</th>
<th>Area</th>
</tr>
</thead>
<tbody>
<tr>
<td>( \triangle )</td>
<td>1 square unit</td>
</tr>
</tbody>
</table>

a. Explain how you know that any triangle made out of equilateral triangles is equilateral.

b. Find the areas of the first four triangles in the pattern.

c. Describe any patterns in the areas. Predict the area of the seventh triangle in the pattern. Explain your reasoning.

22. **REASONING** The base of isosceles \( \triangle XYZ \) is \( \overline{YZ} \). What can you prove? Select all that apply.

A. \( XY \equiv XZ \)
B. \( \angle X \equiv \angle Y \)
C. \( \angle Y \equiv \angle Z \)
D. \( \overline{YZ} \equiv \overline{ZX} \)

In Exercises 23 and 24, find the perimeter of the triangle.

23. \( 7 \text{ in.} \) \( (x + 4) \text{ in.} \) \( (4x + 1) \text{ in.} \)

24. \( (21 - x) \text{ in.} \) \( (2x - 3) \text{ in.} \) \( (x + 5) \text{ in.} \)

25. Complementary colors lie directly opposite each other on the color wheel. Explain how you know that the yellow triangle is congruent to the purple triangle.

26. The measure of the vertex angle of the yellow triangle is 30°. Find the measures of the base angles.

27. Trace the color wheel. Then form a triangle whose vertices are the midpoints of the bases of the red, yellow, and blue triangles. (These colors are the primary colors.) What type of triangle is this?

28. Other triangles can be formed on the color wheel that are congruent to the triangle in Exercise 27. The colors on the vertices of these triangles are called triads. What are the possible triads?

29. **CRITICAL THINKING** Are isosceles triangles always acute triangles? Explain your reasoning.

30. **CRITICAL THINKING** Is it possible for an equilateral triangle to have an angle measure other than 60°? Explain your reasoning.

31. **MATHEMATICAL CONNECTIONS** The lengths of the sides of a triangle are 3t, 5t − 12, and t + 20. Find the values of t that make the triangle isosceles. Explain your reasoning.

32. **MATHEMATICAL CONNECTIONS** The measure of an exterior angle of an isosceles triangle is \( x^\circ \). Write expressions representing the possible angle measures of the triangle in terms of \( x \).

33. **WRITING** Explain why the measure of the vertex angle of an isosceles triangle must be an even number of degrees when the measures of all the angles of the triangle are whole numbers.

---

Section 12.4 Equilateral and Isosceles Triangles 613
34. **PROBLEM SOLVING** The triangular faces of the peaks on a roof are congruent isosceles triangles with vertex angles $U$ and $V$.

![Image of a roof with triangular peaks]

a. Name two angles congruent to $\angle WUX$. Explain your reasoning.

b. Find the distance between points $U$ and $V$.

35. **PROBLEM SOLVING** A boat is traveling parallel to the shore along $\overrightarrow{RT}$. When the boat is at point $R$, the captain measures the angle to the lighthouse as $35^\circ$. After the boat has traveled 2.1 miles, the captain measures the angle to the lighthouse to be $70^\circ$.

![Graph showing the boat's movement and angles]

a. Find $SL$. Explain your reasoning.

b. Explain how to find the distance between the boat and the shoreline.

36. **THOUGHT PROVOKING** The postulates and theorems in this book represent Euclidean geometry. In spherical geometry, all points are points on the surface of a sphere. A line is a circle on the sphere whose diameter is equal to the diameter of the sphere. In spherical geometry, do all equiangular triangles have the same angle measures? Justify your answer.

37. **PROVING A COROLLARY** Prove that the Corollary to the Base Angles Theorem follows from the Base Angles Theorem.

38. **HOW DO YOU SEE IT?** You are designing fabric purses to sell at the school fair.

![Image of a fabric purse]

a. Explain why $\triangle ABE \cong \triangle DCE$.

b. Name the isosceles triangles in the purse.

c. Name three angles that are congruent to $\angle EAD$.

39. **PROVING A COROLLARY** Prove that the Corollary to the Converse of the Base Angles Theorem follows from the Converse of the Base Angles Theorem.

40. **MAKING AN ARGUMENT** The coordinates of two points are $T(0, 6)$ and $U(6, 0)$. Your friend claims that points $T$, $U$, and $V$ will always be the vertices of an isosceles triangle when $V$ is any point on the line $y = x$. Is your friend correct? Explain your reasoning.

41. **PROOF** Use the diagram to prove that $\triangle DEF$ is equilateral.

![Diagram of $\triangle DEF$]

**Given** $\triangle ABC$ is equilateral.

$\angle CAD \equiv \angle ABE \equiv \angle BCF$

**Prove** $\triangle DEF$ is equilateral.

**Maintaining Mathematical Proficiency**

Reviewing what you learned in previous grades and lessons

**Use the given property to complete the statement.** *(Section 9.4)*

42. Reflexive Property of Congruence: $\overline{SE} \equiv \overline{SE}$

43. Symmetric Property of Congruence: If $\overline{RS} \equiv \overline{JK}$, then $\overline{RS} \equiv \overline{JK}$.

44. Transitive Property of Congruence: If $\overline{EF} \equiv \overline{PQ}$, and $\overline{PQ} \equiv \overline{UV}$, then $\overline{EF} \equiv \overline{UV}$. 

614 Chapter 12 Congruent Triangles
• Form a study group of three or four students several weeks before the final exam.
• Find out what material you must know for the final exam, even if your teacher has not yet covered it.
• Ask for a practice final exam or create one yourself and have your teacher look at it.
• Have each group member take the practice final exam.
• Decide when the group is going to meet and what you will cover during each session.
• During the sessions, make sure you stay on track.
Find the measure of the exterior angle. (Section 12.1)

1. \[ \text{exterior angle} + 30° = 80° \]
2. \[ (5x + 2)° + 6x° = (15x + 34)° \]
3. \[ (12x + 26)° = 29° \]

Identify all pairs of congruent corresponding parts. Then write another congruence statement for the polygons. (Section 12.2)

4. \( \triangle ABC \cong \triangle DEF \)
5. \( \triangle QRS \cong \triangle WXYZ \)

Decide whether enough information is given to prove that the triangles are congruent using the SAS Congruence Theorem. If so, write a proof. If not, explain why. (Section 12.3)

Communicate Your Answer

2. What can you conclude about two triangles when you know the corresponding sides are congruent?

3. How would you prove your conclusion in Exploration 1(e)?
What You Will Learn

- Use the Side-Side-Side (SSS) Congruence Theorem.
- Use the Hypotenuse-Leg (HL) Congruence Theorem.

Using the Side-Side-Side Congruence Theorem

**Theorem**

**Side-Side-Side (SSS) Congruence Theorem**

If three sides of one triangle are congruent to three sides of a second triangle, then the two triangles are congruent.

If \( AB \equiv DE, BC \equiv EF, \) and \( AC \equiv DF \), then \( \triangle ABC \equiv \triangle DEF \).

**PROOF**

**Side-Side-Side (SSS) Congruence Theorem**

**Given** \( AB \equiv DE, BC \equiv EF, AC \equiv DF \)

**Prove** \( \triangle ABC \equiv \triangle DEF \)

First, translate \( \triangle ABC \) so that point \( A \) maps to point \( D \), as shown below.

This translation maps \( \triangle ABC \) to \( \triangle DB'C' \). Next, rotate \( \triangle DB'C' \) counterclockwise through \( \angle C'DF \) so that the image of \( DC' \) coincides with \( DF \), as shown below.

Because \( DC' \equiv DF \), the rotation maps point \( C' \) to point \( F \). So, this rotation maps \( \triangle DB'C' \) to \( \triangle DBF \). Draw an auxiliary line through points \( E \) and \( B'' \). This line creates \( \angle 1, \angle 2, \angle 3, \) and \( \angle 4 \), as shown at the left.

Because \( DE \equiv DB', \triangle DEB' \) is an isosceles triangle. Because \( FE \equiv FB', \triangle FEB'' \) is an isosceles triangle. By the Base Angles Theorem, \( \angle 1 \equiv \angle 3 \) and \( \angle 2 \equiv \angle 4 \). By the definition of congruence, \( m\angle 1 = m\angle 3 \) and \( m\angle 2 = m\angle 4 \). By construction, \( m\angle DEF = m\angle 1 + m\angle 2 \) and \( m\angle DBF = m\angle 3 + m\angle 4 \). You can now use the Substitution Property of Equality to show \( m\angle DEF = m\angle DBF \).

\[
m\angle DEF = m\angle 1 + m\angle 2 \quad \text{Angle Addition Postulate}
= m\angle 3 + m\angle 4 \quad \text{Substitute } m\angle 3 \text{ for } m\angle 1 \text{ and } m\angle 4 \text{ for } m\angle 2.
= m\angle DBF \quad \text{Angle Addition Postulate}
\]

By the definition of congruence, \( \angle DEF \equiv \angle DBF \). So, two pairs of sides and their included angles are congruent. By the SAS Congruence Theorem, \( \triangle DBF \equiv \triangle DEF \). So, a composition of rigid motions maps \( \triangle DBF \) to \( \triangle DEF \). Because a composition of rigid motions maps \( \triangle ABC \) to \( \triangle DBF \) and a composition of rigid motions maps \( \triangle DBF \) to \( \triangle DEF \), a composition of rigid motions maps \( \triangle ABC \) to \( \triangle DEF \). So, \( \triangle ABC \equiv \triangle DEF \).
Section 12.5 Proving Triangle Congruence by SSS

Example 1 Using the SSS Congruence Theorem

Write a proof.

Given $\overline{KL} \cong \overline{NL}$, $\overline{KM} \cong \overline{NM}$

Prove $\triangle KLM \cong \triangle NLM$

**SOLUTION**

</tbody>
</table>

Monitoring Progress

Decide whether the congruence statement is true. Explain your reasoning.

1. $\triangle DFG \cong \triangle HJK$
2. $\triangle ACB \cong \triangle CAD$
3. $\triangle QPT \cong \triangle RST$

Example 2 Solving a Real-Life Problem

Explain why the bench with the diagonal support is stable, while the one without the support can collapse.

**SOLUTION**

The bench with the diagonal support forms triangles with fixed side lengths. By the SSS Congruence Theorem, these triangles cannot change shape, so the bench is stable. The bench without the diagonal support is not stable because there are many possible quadrilaterals with the given side lengths.

Monitoring Progress

Determine whether the figure is stable. Explain your reasoning.

4. 
5. 
6.
Chapter 12  Congruent Triangles

Using the Hypotenuse-Leg Congruence Theorem

You know that SAS and SSS are valid methods for proving that triangles are congruent. What about SSA?

In general, SSA is not a valid method for proving that triangles are congruent. In the triangles below, two pairs of sides and a pair of angles not included between them are congruent, but the triangles are not congruent.

While SSA is not valid in general, there is a special case for right triangles. In a right triangle, the sides adjacent to the right angle are called the legs. The side opposite the right angle is called the hypotenuse of the right triangle.

**THEOREM**

**Hypotenuse-Leg (HL) Congruence Theorem**

If the hypotenuse and a leg of a right triangle are congruent to the hypotenuse and a leg of a second right triangle, then the two triangles are congruent.

If \( AB \cong DE \), \( AC \cong DF \), and \( m \angle C = m \angle F = 90^\circ \), then \( \triangle ABC \cong \triangle DEF \).

*Proof* BigIdeasMath.com

CONSTRUCTION  Copying a Triangle Using SSS

Construct a side

Construct \( DE \) so that it is congruent to \( AB \).

Draw an arc

Open your compass to the length \( AC \). Use this length to draw an arc with center \( D \).

Draw an arc

Draw an arc with radius \( BC \) and center \( E \) that intersects the arc from Step 2. Label the intersection point \( F \).

Draw a triangle

Draw \( \triangle DEF \). By the SSS Congruence Theorem, \( \triangle ABC \cong \triangle DEF \).
Using the Hypotenuse-Leg Congruence Theorem

Write a proof.

Given \( \overline{WY} \cong \overline{XZ}, \overline{WZ} \perp \overline{ZY}, \overline{XY} \perp \overline{ZY} \)

Prove \( \triangle WYZ \cong \triangle XZY \)

**SOLUTION**

Redraw the triangles so they are side by side with corresponding parts in the same position. Mark the given information in the diagram.

**STATEMENTS**                              **REASONS**

H 1. \( \overline{WY} \cong \overline{XZ} \)                  1. Given

2. \( \overline{WZ} \perp \overline{ZY}, \overline{XY} \perp \overline{ZY} \) 2. Given

3. \( \angle Z \) and \( \angle Y \) are right angles. 3. Definition of \( \perp \) lines

4. \( \triangle WYZ \) and \( \triangle XZY \) are right triangles. 4. Definition of a right triangle

L 5. \( \overline{ZY} \cong \overline{YZ} \)                     5. Reflexive Property of Congruence

6. \( \triangle WYZ \cong \triangle XZY \)                  6. HL Congruence Theorem

**EXAMPLE 4** Using the Hypotenuse-Leg Congruence Theorem

The television antenna is perpendicular to the plane containing points \( B, C, D, \) and \( E \). Each of the cables running from the top of the antenna to \( B, C, \) and \( D \) has the same length. Prove that \( \triangle AEB, \triangle AEC, \) and \( \triangle AED \) are congruent.

Given \( \overline{AE} \perp \overline{EB}, \overline{AE} \perp \overline{EC}, \overline{AE} \perp \overline{ED}, \overline{AB} \equiv \overline{AC} \equiv \overline{AD} \)

Prove \( \triangle AEB \cong \triangle AEC \cong \triangle AED \)

**SOLUTION**

You are given that \( \overline{AE} \perp \overline{EB} \) and \( \overline{AE} \perp \overline{EC} \). So, \( \angle AEB \) and \( \angle AEC \) are right angles by the definition of perpendicular lines. By definition, \( \triangle AEB \) and \( \triangle AEC \) are right triangles. You are given that the hypotenuses of these two triangles, \( \overline{AB} \) and \( \overline{AC} \), are congruent. Also, \( \overline{AE} \) is a leg for both triangles, and \( \overline{AE} \equiv \overline{AE} \) by the Reflexive Property of Congruence. So, by the Hypotenuse-Leg Congruence Theorem, \( \triangle AEB \cong \triangle AEC \). You can use similar reasoning to prove that \( \triangle AEC \cong \triangle AED \).

So, by the Transitive Property of Triangle Congruence, \( \triangle AEB \cong \triangle AEC \cong \triangle AED \).

**Monitoring Progress**

Use the diagram.

7. Redraw \( \triangle ABC \) and \( \triangle DCB \) side by side with corresponding parts in the same position.

8. Use the information in the diagram to prove that \( \triangle ABC \equiv \triangle DCB \).

CONSTRUCTION In Exercises 17 and 18, construct a triangle that is congruent to \( \triangle QRS \) using the SSS Congruence Theorem.

17. \( Q \quad R \quad S \)
18. \( Q \quad S \quad R \)

19. ERROR ANALYSIS Describe and correct the error in identifying congruent triangles.

20. ERROR ANALYSIS Describe and correct the error in determining the value of \( x \) that makes the triangles congruent.

21. MAKING AN ARGUMENT Your friend claims that in order to use the SSS Congruence Theorem to prove that two triangles are congruent, both triangles must be equilateral triangles. Is your friend correct? Explain your reasoning.

22. MODELING WITH MATHEMATICS The distances between consecutive bases on a softball field are the same. The distance from home plate to second base is the same as the distance from first base to third base. The angles created at each base are 90°. Prove \( \triangle HFS \cong \triangle FST \cong \triangle STH \). (See Example 4.)

23. REASONING To support a tree, you attach wires from the trunk of the tree to stakes in the ground, as shown in the diagram.

24. REASONING Use the photo of the Navajo rug, where \( BC \equiv DE \) and \( AC \equiv CE \).

a. What additional information do you need to use the SSS Congruence Theorem to prove that \( \triangle ABC \cong \triangle CDE \)?

b. What additional information do you need to use the HL Congruence Theorem to prove that \( \triangle ABC \cong \triangle CDE \)?

Section 12.5 Proving Triangle Congruence by SSS 623
In Exercises 25–28, use the given coordinates to determine whether \( \triangle ABC \cong \triangle DEF \).

25. \[ A(-2, -2), \ B(4, -2), \ C(4, 6), \ D(5, 7), \ E(5, 1), \ F(13, 1) \]

26. \[ A(-1, 1), \ B(3, -3), \ C(7, 5), \ D(3, 6), \ E(8, 2), \ F(10, 11) \]

27. \[ A(0, 0), \ B(6, 5), \ C(9, 0), \ D(0, -1), \ E(6, -6), \ F(9, -1) \]

28. \[ A(-5, 7), \ B(-5, 2), \ C(0, 2), \ D(0, 6), \ E(0, 1), \ F(4, 1) \]

29. CRITICAL THINKING You notice two triangles in the tile floor of a hotel lobby. You want to determine whether the triangles are congruent, but you only have a piece of string. Can you determine whether the triangles are congruent? Explain.

30. HOW DO YOU SEE IT? There are several theorems you can use to show that the triangles in the “square” pattern are congruent. Name two of them.

31. MAKING AN ARGUMENT Your cousin says that \( \triangle JKL \) is congruent to \( \triangle LMJ \) by the SSS Congruence Theorem. Your friend says that \( \triangle JKL \) is congruent to \( \triangle LMJ \) by the HL Congruence Theorem. Who is correct? Explain your reasoning.

32. THOUGHT PROVOKING The postulates and theorems in this book represent Euclidean geometry. In spherical geometry, all points are points on the surface of a sphere. A line is a circle on the sphere whose diameter is equal to the diameter of the sphere. In spherical geometry, do you think that two triangles are congruent if their corresponding sides are congruent? Justify your answer.

USING TOOLS In Exercises 33 and 34, use the given information to sketch \( \triangle LMN \) and \( \triangle STU \). Mark the triangles with the given information.

33. \( LM \perp MN \), \( ST \perp TU \), \( LM \equiv NM \equiv UT \equiv ST \)

34. \( LM \perp MN \), \( ST \perp TU \), \( LM \equiv ST \), \( LN \equiv SU \)

35. CRITICAL THINKING The diagram shows the light created by two spotlights. Both spotlights are the same distance from the stage.

a. Show that \( \triangle ABD \cong \triangle CBD \). State which theorem or postulate you used and explain your reasoning.

b. Are all four right triangles shown in the diagram congruent? Explain your reasoning.

36. MATHEMATICAL CONNECTIONS Find all values of \( x \) that make the triangles congruent. Explain.

Maintaining Mathematical Proficiency Reviewing what you learned in previous grades and lessons

Use the congruent triangles. (Section 12.2)

37. Name the segment in \( \triangle DEF \) that is congruent to \( \overline{AC} \).

38. Name the segment in \( \triangle ABC \) that is congruent to \( \overline{EF} \).

39. Name the angle in \( \triangle ABC \) that is congruent to \( \angle B \).

40. Name the angle in \( \triangle DEF \) that is congruent to \( \angle F \).
12.6 Proving Triangle Congruence by ASA and AAS

Essential Question What information is sufficient to determine whether two triangles are congruent?

EXPLORATION 1 Determining Whether SSA Is Sufficient

Work with a partner.

a. Use dynamic geometry software to construct \( \triangle ABC \). Construct the triangle so that vertex \( B \) is at the origin, \( AB \) has a length of 3 units, and \( BC \) has a length of 2 units.

b. Construct a circle with a radius of 2 units centered at the origin. Locate point \( D \) where the circle intersects \( AC \). Draw \( BD \).

Sample

Points

\( A(0, 3) \)

\( B(0, 0) \)

\( C(2, 0) \)

\( D(0.77, 1.85) \)

Segments

\( AB = 3 \)

\( AC = 3.61 \)

\( BC = 2 \)

\( AD = 1.38 \)

Angle

\( m\angle A = 33.69^\circ \)

c. \( \triangle ABC \) and \( \triangle ABD \) have two congruent sides and a nonincluded congruent angle. Name them.

d. Is \( \triangle ABC \cong \triangle ABD \)? Explain your reasoning.

e. Is SSA sufficient to determine whether two triangles are congruent? Explain your reasoning.

EXPLORATION 2 Determining Valid Congruence Theorems

Work with a partner. Use dynamic geometry software to determine which of the following are valid triangle congruence theorems. For those that are not valid, write a counterexample. Explain your reasoning.

3. What information is sufficient to determine whether two triangles are congruent?

4. Is it possible to show that two triangles are congruent using more than one congruence theorem? If so, give an example.

Section 12.6 Proving Triangle Congruence by ASA and AAS 625
What You Will Learn

Use the ASA and AAS Congruence Theorems.

Using the ASA and AAS Congruence Theorems

**Theorem**

**Angle-Side-Angle (ASA) Congruence Theorem**

If two angles and the included side of one triangle are congruent to two angles and
the included side of a second triangle, then the two triangles are congruent.

If $\angle A \cong \angle D$, $\overline{AC} \cong \overline{DF}$, and $\angle C \cong \angle F$,
then $\triangle ABC \cong \triangle DEF$.

**Proof** p. 626

**PROOF** Angle-Side-Angle (ASA) Congruence Theorem

Given $\angle A \cong \angle D$, $\overline{AC} \cong \overline{DF}$, $\angle C \cong \angle F$

Prove $\triangle ABC \cong \triangle DEF$

First, translate $\triangle ABC$ so that point $A$ maps to point $D$, as shown below.

This translation maps $\triangle ABC$ to $\triangle DB'C'$. Next, rotate $\triangle DB'C'$ counterclockwise through $\angle C'DF$ so that the image of $DC'$ coincides with $DF$, as shown below.

Because $\overline{DC'} \cong \overline{DF}$, the rotation maps point $C'$ to point $F$. So, this rotation maps $\triangle DB'C'$ to $\triangle DB'F$. Now, reflect $\triangle DB'F$ in the line through points $D$ and $F$, as shown below.

Because points $D$ and $F$ lie on $DF$, this reflection maps them onto themselves. Because a reflection preserves angle measure and $\angle B'DF \cong \angle EDF$, the reflection maps $\overline{DB'}$ to $\overline{DE}$. Similarly, because $\angle B'FD \cong \angle EFD$, the reflection maps $\overline{FB'}$ to $\overline{FE}$. The image of $B'$ lies on $\overline{DE}$ and $\overline{FE}$. Because $\overline{DE}$ and $\overline{FE}$ only have point $E$ in common, the image of $B'$ must be $E$. So, this reflection maps $\triangle DB'F$ to $\triangle DEF$.

Because you can map $\triangle ABC$ to $\triangle DEF$ using a composition of rigid motions, $\triangle ABC \cong \triangle DEF$. 

626 Chapter 12 Congruent Triangles
Section 12.6  Proving Triangle Congruence by ASA and AAS

Theorem

Angle-Angle-Side (AAS) Congruence Theorem

If two angles and a non-included side of one triangle are congruent to two angles and the corresponding non-included side of a second triangle, then the two triangles are congruent.

If \( \angle A \cong \angle D \), \( \angle C \cong \angle F \), and \( BC \cong EF \), then \( \triangle ABC \cong \triangle DEF \).

Proof p. 627

PROOF  Angle-Angle-Side (AAS) Congruence Theorem

Given  \( \angle A \cong \angle D \),  \( \angle C \cong \angle F \),  \( BC \cong EF \)

Prove  \( \triangle ABC \cong \triangle DEF \)

You are given \( \angle A \cong \angle D \) and \( \angle C \cong \angle F \). By the Third Angles Theorem, \( \angle B \cong \angle E \).

You are given \( BC \cong EF \). So, two pairs of angles and their included sides are congruent. By the ASA Congruence Theorem, \( \triangle ABC \cong \triangle DEF \).

EXAMPLE 1  Identifying Congruent Triangles

Can the triangles be proven congruent with the information given in the diagram? If so, state the theorem you would use.

a.  

SOLUTION

a. The vertical angles are congruent, so two pairs of angles and a pair of non-included sides are congruent. The triangles are congruent by the AAS Congruence Theorem.

b. There is not enough information to prove the triangles are congruent, because no sides are known to be congruent.

c. Two pairs of angles and their included sides are congruent. The triangles are congruent by the ASA Congruence Theorem.

Monitoring Progress  Help in English and Spanish at BigIdeasMath.com

1. Can the triangles be proven congruent with the information given in the diagram? If so, state the theorem you would use.
CONSTRUCTION  Copying a Triangle Using ASA

Construct a triangle that is congruent to $\triangle ABC$ using the ASA Congruence Theorem. Use a compass and straightedge.

SOLUTION

Step 1
Construct a side
Construct $DE$ so that it is congruent to $AB$.

Step 2
Construct an angle
Construct $\angle D$ with vertex $D$ and side $DE$ so that it is congruent to $\angle A$.

Step 3
Construct an angle
Construct $\angle E$ with vertex $E$ and side $ED$ so that it is congruent to $\angle B$.

Step 4
Label a point
Label the intersection of the sides of $\angle D$ and $\angle E$ that you constructed in Steps 2 and 3 as $F$. By the ASA Congruence Theorem, $\triangle ABC \cong \triangle DEF$.

EXAMPLE 2  Using the ASA Congruence Theorem

Write a proof.

Given $AD \parallel EC$, $BD \equiv BC$

In the Exercises, you will prove three additional theorems about the congruence of right triangles: Hypotenuse-Angle, Leg-Leg, and Angle-Leg.
12.6 Exercises

Vocabulary and Core Concept Check

1. **WRITING** How are the AAS Congruence Theorem and the ASA Congruence Theorem similar?
   How are they different?

2. **WRITING** You know that a pair of triangles has two pairs of congruent corresponding angles.
   What other information do you need to show that the triangles are congruent?

Monitoring Progress and Modeling with Mathematics

In Exercises 3–6, decide whether enough information is given to prove that the triangles are congruent. If so, state the theorem you would use. (See Example 1.)

3. \( \triangle ABC, \triangle QRS \)
4. \( \triangle ABC, \triangle DBC \)
5. \( \triangle XYZ, \triangle JKL \)
6. \( \triangle RSV, \triangle UTV \)

In Exercises 7 and 8, state the third congruence statement that is needed to prove that \( \triangle FGH \cong \triangle LMN \) using the given theorem.

7. Given \( GH \equiv MN \), \( \angle G \equiv \angle M \), \( \angle F \equiv \angle L \).
   Use the AAS Congruence Theorem.

8. Given \( FG \equiv LM \), \( \angle G \equiv \angle M \), \( \angle F \equiv \angle L \).
   Use the ASA Congruence Theorem.

In Exercises 9–12, decide whether you can use the given information to prove that \( \triangle ABC \cong \triangle DEF \). Explain your reasoning.

9. \( \angle A \equiv \angle D, \angle C \equiv \angle F, AC \equiv DF \)
10. \( \angle C \equiv \angle F, \overrightarrow{AB} \equiv \overrightarrow{DE}, BC \equiv EF \)
11. \( \angle B \equiv \angle E, \angle C \equiv \angle F, AC \equiv DE \)
12. \( \angle A \equiv \angle D, \angle B \equiv \angle E, BC \equiv EF \)

CONSTRUCTION In Exercises 13 and 14, construct a triangle that is congruent to the given triangle using the ASA Congruence Theorem. Use a compass and straightedge.

13. 
14. 

ERROR ANALYSIS In Exercises 15 and 16, describe and correct the error.

15. \( \triangle JKL \equiv \triangle FGH \) by the ASA Congruence Theorem.
16. \( \triangle QRS \equiv \triangle VWX \) by the AAS Congruence Theorem.
Section 12.6  Proving Triangle Congruence by ASA and AAS

PROOF In Exercises 17 and 18, prove that the triangles are congruent using the ASA Congruence Theorem. (See Example 2.)

17. Given \( M \) is the midpoint of \( NL \), \( NL \perp NQ \), \( NL \perp MF \), \( QM \parallel PL \)
Prove \( \triangle NQM \cong \triangle MPL \)

18. Given \( \overline{AJ} \cong \overline{KC} \), \( \angle BJK \cong \angle BKJ \), \( \angle A \cong \angle C \)
Prove \( \triangle ABK \cong \triangle CBJ \)

PROOF In Exercises 19 and 20, prove that the triangles are congruent using the AAS Congruence Theorem. (See Example 3.)

19. Given \( \overline{VW} \cong \overline{UW} \), \( \angle X \cong \angle Z \)
Prove \( \triangle XWV \cong \triangle ZWU \)

20. Given \( \angle NKM \cong \angle LMK \), \( \angle L \cong \angle N \)
Prove \( \triangle NMK \cong \triangle LKM \)

PROOF In Exercises 21–23, write a paragraph proof for the theorem about right triangles.

21. Hypotenuse-Angle (HA) Congruence Theorem
If an angle and the hypotenuse of a right triangle are congruent to an angle and the hypotenuse of a second right triangle, then the triangles are congruent.

22. Leg-Leg (LL) Congruence Theorem
If the legs of a right triangle are congruent to the legs of a second right triangle, then the triangles are congruent.

23. Angle-Leg (AL) Congruence Theorem
If an angle and a leg of a right triangle are congruent to an angle and a leg of a second right triangle, then the triangles are congruent.

24. REASONING What additional information do you need to prove \( \triangle JKL \cong \triangle MNL \) by the ASA Congruence Theorem?
   \( \text{A} \) \( \overline{KM} \cong \overline{KJ} \)
   \( \text{B} \) \( \overline{KH} \cong \overline{NH} \)
   \( \text{C} \) \( \angle L \equiv \angle I \)
   \( \text{D} \) \( \angle LKJ \equiv \angle LNM \)

25. MATHEMATICAL CONNECTIONS This toy contains \( \triangle ABC \) and \( \triangle DBC \). Can you conclude that \( \triangle ABC \cong \triangle DBC \) from the given angle measures? Explain.

   \( m\angle ABC = (8x - 32)^\circ \)
   \( m\angle DBC = (4y - 24)^\circ \)
   \( m\angle BCA = (5x + 10)^\circ \)
   \( m\angle BCD = (3y + 2)^\circ \)
   \( m\angle CAB = (2x - 8)^\circ \)
   \( m\angle CDB = (y - 6)^\circ \)

26. REASONING Which of the following congruence statements are true? Select all that apply.
   \( \text{A} \) \( \overline{TU} \equiv \overline{UV} \)
   \( \text{B} \) \( \triangle STV \equiv \triangle XWU \)
   \( \text{C} \) \( \triangle TVS \equiv \triangle VWU \)
   \( \text{D} \) \( \triangle VST \equiv \triangle VUW \)

27. PROVING A THEOREM Prove the Converse of the Base Angles Theorem. (Hint: Draw an auxiliary line inside the triangle.)

28. MAKING AN ARGUMENT Your friend claims to be able to rewrite any proof that uses the AAS Congruence Theorem as a proof that uses the ASA Congruence Theorem. Is this possible? Explain your reasoning.
29. **MODELING WITH MATHEMATICS** When a light ray from an object meets a mirror, it is reflected back to your eye. For example, in the diagram, a light ray from point \( C \) is reflected at point \( D \) and travels back to point \( A \). The law of reflection states that the angle of incidence, \( \angle CDB \), is congruent to the angle of reflection, \( \angle ADB \).

   a. Prove that \( \triangle ABD \) is congruent to \( \triangle CBD \).
   
   **Given** \( \angle CDB \cong \angle ADB \), \( DB \perp AC \)
   
   **Prove** \( \triangle ABD \cong \triangle CBD \)

b. Verify that \( \triangle ACD \) is isosceles.

c. Does moving away from the mirror have any effect on the amount of his or her reflection a person sees? Explain.

30. **HOW DO YOU SEE IT?** Name as many pairs of congruent triangles as you can from the diagram. Explain how you know that each pair of triangles is congruent.

31. **CONSTRUCTION** Construct a triangle. Show that there is no AAA congruence rule by constructing a second triangle that has the same angle measures but is not congruent.

32. **THOUGHT PROVOKING** Graph theory is a branch of mathematics that studies vertices and the way they are connected. In graph theory, two polygons are isomorphic if there is a one-to-one mapping from one polygon’s vertices to the other polygon’s vertices that preserves adjacent vertices. In graph theory, are any two triangles isomorphic? Explain your reasoning.

33. **MATHEMATICAL CONNECTIONS** Six statements are given about \( \triangle TUV \) and \( \triangle XYZ \):

   \[
   \begin{align*}
   TU & \equiv XY \\
   UV & \equiv YZ \\
   TV & \equiv XZ \\
   \angle T & \equiv \angle X \\
   \angle U & \equiv \angle Y \\
   \angle V & \equiv \angle Z
   \end{align*}
   \]

   a. List all combinations of three given statements that would provide enough information to prove that \( \triangle TUV \) is congruent to \( \triangle XYZ \).

   b. You choose three statements at random. What is the probability that the statements you choose provide enough information to prove that the triangles are congruent?

34. Find the coordinates of the midpoint of the line segment with the given endpoints. (Section 8.3)

   34. \( C(1, 0) \) and \( D(5, 4) \)

   35. \( J(-2, 3) \) and \( K(4, -1) \)

   36. \( R(-5, -7) \) and \( S(2, -4) \)

37. Copy the angle using a compass and straightedge. (Section 8.5)

   37.

   38.
12.7 Using Congruent Triangles

Essential Question: How can you use congruent triangles to make an indirect measurement?

Exploration 1: Measuring the Width of a River

Work with a partner. The figure shows how a surveyor can measure the width of a river by making measurements on only one side of the river.

a. Study the figure. Then explain how the surveyor can find the width of the river.

b. Write a proof to verify that the method you described in part (a) is valid.

Given: \( \angle A \) is a right angle, \( \angle D \) is a right angle, \( \overline{AC} \cong \overline{CD} \)

c. Exchange proofs with your partner and discuss the reasoning used.

Exploration 2: Measuring the Width of a River

Work with a partner. It was reported that one of Napoleon’s officers estimated the width of a river as follows. The officer stood on the bank of the river and lowered the visor on his cap until the farthest thing visible was the edge of the bank on the other side. He then turned and noted the point on his side that was in line with the tip of his visor and his eye. The officer then paced the distance to this point and concluded that distance was the width of the river.

a. Study the figure. Then explain how the officer concluded that the width of the river is \( \overline{EG} \).

b. Write a proof to verify that the conclusion the officer made is correct.

Given: \( \angle DEG \) is a right angle, \( \angle DEF \) is a right angle, \( \angle EDG \cong \angle EDF \)

c. Exchange proofs with your partner and discuss the reasoning used.

Communicate Your Answer

3. How can you use congruent triangles to make an indirect measurement?

4. Why do you think the types of measurements described in Explorations 1 and 2 are called indirect measurements?
What You Will Learn

- Use congruent triangles to solve problems.
- Use congruent triangles to write proofs.

Using Congruent Triangles to Solve Problems

**EXAMPLE 1**

**Using Congruent Triangles**

Explain how you can use the given information to prove that the hang glider parts are congruent.

**Given**

\[ \angle 1 \cong \angle 2, \quad \angle RTQ \cong \angle RTS \]

**Prove**

\[ \overline{QT} \cong \overline{ST} \]

**SOLUTION**

If you can show that \( \triangle QRT \cong \triangle SRT \), then you will know that \( \overline{QT} \cong \overline{ST} \). First, copy the diagram and mark the given information. Then mark the information that you can deduce. In this case, \( \angle RQT \) and \( \angle RST \) are supplementary to congruent angles, so \( \angle RQT \cong \angle RST \). Also, \( \overline{RT} \cong \overline{RT} \) by the Reflexive Property of Congruence. Two angle pairs and a non-included side are congruent, so by the AAS Congruence Theorem, \( \triangle QRT \cong \triangle SRT \).

Because corresponding parts of congruent triangles are congruent, \( \overline{QT} \cong \overline{ST} \).

**EXAMPLE 2**

**Using Congruent Triangles for Measurement**

To find the distance across the river, from point \( N \) to point \( P \), first place a stake at \( K \) on the near side so that \( \overline{NK} \perp \overline{NP} \). Then find \( M \), the midpoint of \( \overline{NK} \). Finally, locate the point \( L \) so that \( \overline{NK} \perp \overline{KL} \) and \( L, P, \) and \( M \) are collinear.

Explain how this plan allows you to find the distance.

**SOLUTION**

Because \( \overline{NK} \perp \overline{NP} \) and \( \overline{NK} \perp \overline{KL} \), \( \angle N \) and \( \angle K \) are congruent right angles. Because \( M \) is the midpoint of \( \overline{NK} \), \( \overline{NM} \cong \overline{KM} \). The vertical angles \( \angle KML \) and \( \angle NMP \) are congruent. So, \( \triangle MLK \cong \triangle MPN \) by the ASA Congruence Theorem. Then because corresponding parts of congruent triangles are congruent, \( \overline{KL} \cong \overline{NP} \). So, you can find the distance \( NP \) across the river by measuring \( KL \).

**Monitoring Progress**

1. Explain how you can prove that \( \angle A \cong \angle C \).
2. In Example 2, does it matter how far from point \( N \) you place a stake at point \( K \)? Explain.
Using Congruent Triangles to Write Proofs

**EXAMPLE 3** Planning a Proof Involving Pairs of Triangles

Use the given information to write a plan for proof.

**Given** \( \angle 1 \equiv \angle 2, \angle 3 \equiv \angle 4 \)

**Prove** \( \triangle BCE \equiv \triangle DCE \)

**SOLUTION**

In \( \triangle BCE \) and \( \triangle DCE \), you know that \( \angle 1 \equiv \angle 2 \) and \( CE \equiv CE \). If you can show that \( CB \equiv CD \), then you can use the SAS Congruence Theorem.

To prove that \( CB \equiv CD \), you can first prove that \( \triangle CBA \equiv \triangle CDA \). You are given \( \angle 1 \equiv \angle 2 \) and \( \angle 3 \equiv \angle 4 \), \( CA \equiv CA \) by the Reflexive Property of Congruence. You can use the ASA Congruence Theorem to prove that \( \triangle CBA \equiv \triangle CDA \).

**Plan for Proof** Use the ASA Congruence Theorem to prove that \( \triangle CBA \equiv \triangle CDA \). Then state that \( CB \equiv CD \). Use the SAS Congruence Theorem to prove that \( \triangle BCE \equiv \triangle DCE \).

**EXAMPLE 4** Proving a Construction

Write a proof to verify that the construction for copying an angle on page 416 is valid.

**SOLUTION**

Add \( BC \) and \( EF \) to the diagram on page 416. In the construction, one compass setting determines \( AB, DE, AC, \) and \( DF \), and another compass setting determines \( BC \) and \( EF \). So, you can assume the following as given statements.

**Given** \( AB \equiv DE, AC \equiv DF, BC \equiv EF \)

**Prove** \( \angle D \equiv \angle A \)

**Plan for Proof** Show that \( \triangle DEF \equiv \triangle ABC \), so you can conclude that the corresponding parts \( \angle D \) and \( \angle A \) are congruent.

**Plan in Action**

<table>
<thead>
<tr>

</tr>
</tbody>
</table>

**Monitoring Progress**

3. Write a plan to prove that \( \triangle PTU \equiv \triangle UQP \).

4. Use the construction of an angle bisector on page 418. What segments can you assume are congruent?
You can use congruent triangles to prove the Slopes of Perpendicular Lines Theorem. Because the theorem is a biconditional statement, you must prove both parts.

**PROOF** Slopes of Perpendicular Lines Theorem

1. If two nonvertical lines are perpendicular, then the product of their slopes is $-1$.
   
   **Given** $\ell \perp n$, $\ell$ and $n$ are nonvertical.
   
   **Prove** $m_\ell m_n = -1$
   
   **Paragraph Proof** Draw two nonvertical, perpendicular lines, $\ell$ and $n$, so that line $\ell$ has a positive slope and the lines intersect at point $A$. Draw right $\triangle ABC$ as shown, where $AB$ lies on $\ell$, $BC$ is vertical with length $a$, and $AC$ is horizontal with length $b$.
   
   By definition, the slope of line $\ell$ is $m_\ell = \frac{a}{b}$.
   
   Rotate $\triangle ABC$ $90^\circ$ counterclockwise about point $A$. The image is $\triangle AB'C'$. Because $\ell \perp n$, $B'$ lies on line $n$. Because rotations preserve angle measure, $\angle C'$ is a right angle. Because rotations preserve length, $B'C' = BC = a$ and $AC' = AC = b$. By definition, the slope of line $n$ is $m_n = -\frac{b}{a}$. So, $m_\ell m_n = \frac{a}{b} \left( -\frac{b}{a} \right) = -1$.

2. If the product of the slopes of two nonvertical lines is $-1$, then the lines are perpendicular.
   
   **Given** $m_\ell m_n = -1$
   
   **Prove** $\ell \perp n$
   
   **Paragraph Proof** Let $m_\ell = \frac{a}{b}$, where $a$ and $b$ are both positive. You know that $m_\ell m_n = -1$. By substitution, $\frac{a}{b} \cdot m_n = -1$. So, $m_n = -\frac{b}{a}$.
   
   Draw lines $\ell$ and $n$ and label the point where the lines intersect as point $A$. Draw right $\triangle ABC$ and right $\triangle ADE$, as shown.
   
   Because $DE = BC = a$ and $AE = AC = b$, $DE \equiv BC$ and $AE \equiv AC$. By the Right Angles Congruence Theorem, $\angle E \equiv \angle C$. So, $\triangle ABC \equiv \triangle ADE$ by the SAS Congruence Theorem.
   
   Because $AE$ is vertical and $AC$ is horizontal, $\angle EAC$ is a right angle. By definition, $\angle EAB$ and $\angle BAC$ are complementary angles. So, $m_{\angle EAB} + m_{\angle BAC} = 90^\circ$.
   
   $\angle DAE \equiv \angle BAC$ because corresponding parts of congruent triangles are congruent. By substitution, $m_{\angle EAB} + m_{\angle DAE} = 90^\circ$. By the Commutative Property of Addition, $m_{\angle DAE} + m_{\angle EAB} = 90^\circ$. By the Angle Addition Postulate, $m_{\angle DAE} + m_{\angle EAB} = m_{\angle DAB}$.
   
   So, by the Transitive Property of Equality, $m_{\angle DAB} = 90^\circ$ and line $\ell$ is perpendicular to line $n$. 

**READING**

The notation $m_\ell$ is read as “the slope of line $\ell$.”

**STUDY TIP**

The case where line $\ell$ has a negative slope is proved similarly.

**STUDY TIP**

The case where line $\ell$ has a negative slope is proved similarly.
12.7 Exercises

Vocabulary and Core Concept Check
1. COMPLETE THE SENTENCE __________ parts of congruent triangles are congruent.
2. WRITING Describe a situation in which you might choose to use indirect measurement with congruent triangles to find a measure rather than measuring directly.

Monitoring Progress and Modeling with Mathematics

In Exercises 3–8, explain how to prove that the statement is true. (See Example 1.)

3. \( \angle A \cong \angle D \)

4. \( \angle Q \cong \angle T \)

5. \( JM \equiv LM \)

6. \( AC \equiv DB \)

7. \( GK \equiv HJ \)

8. \( QW \equiv VT \)

In Exercises 9–12, write a plan to prove that \( \angle 1 \equiv \angle 2 \). (See Example 3.)

9. 

10. 

11. 

12. 

In Exercises 13 and 14, write a proof to verify that the construction is valid. (See Example 4.)

13. Line perpendicular to a line through a point not on the line

**Plan for Proof** Show that \( \triangle APQ \equiv \triangle BPQ \) by the SSS Congruence Theorem. Then show that \( \triangle APM \equiv \triangle BPM \) using the SAS Congruence Theorem. Use corresponding parts of congruent triangles to show that \( \angle AMP \) and \( \angle BMP \) are right angles.

14. Line perpendicular to a line through a point on the line

**Plan for Proof** Show that \( \triangle APQ \equiv \triangle BPQ \) by the SSS Congruence Theorem. Use corresponding parts of congruent triangles to show that \( \angle QPA \) and \( \angle QPB \) are right angles.

In Exercises 15 and 16, use the information given in the diagram to write a proof.

15. Prove \( \overline{FL} \equiv \overline{HN} \)

16. 

Section 12.7 Using Congruent Triangles 637
16. Prove \( \triangle PUX \cong \triangle QSY \)

\[ \begin{array}{c}

\end{array} \]

24. Find the perimeter of the polygon with the given vertices. (Section 8.4)
   a. \( A(-1, 1), B(4, 1), C(4, -2), D(-1, -2) \)
   b. \( J(-5, 3), K(-2, 1), L(3, 4) \)

638 Chapter 12 Congruent Triangles
12.8 Coordinate Proofs

**Essential Question** How can you use a coordinate plane to write a proof?

**EXPLORATION 1** Writing a Coordinate Proof

Work with a partner.

a. Use dynamic geometry software to draw \( \overline{AB} \) with endpoints \( A(0, 0) \) and \( B(6, 0) \).

b. Draw the vertical line \( x = 3 \).

c. Draw \( \triangle ABC \) so that \( C \) lies on the line \( x = 3 \).

d. Use your drawing to prove that \( \triangle ABC \) is an isosceles triangle.

**EXPLORATION 2** Writing a Coordinate Proof

Work with a partner.

a. Use dynamic geometry software to draw \( \overline{AB} \) with endpoints \( A(0, 0) \) and \( B(6, 0) \).

b. Draw the vertical line \( x = 3 \).

c. Plot the point \( C(3, 3) \) and draw \( \triangle ABC \). Then use your drawing to prove that \( \triangle ABC \) is an isosceles right triangle.

d. Change the coordinates of \( C \) so that \( C \) lies below the x-axis and \( \triangle ABC \) is an isosceles right triangle.

e. Write a coordinate proof to show that if \( C \) lies on the line \( x = 3 \) and \( \triangle ABC \) is an isosceles right triangle, then \( C \) must be the point \( (3, 3) \) or the point found in part (d).

**Communicate Your Answer**

3. How can you use a coordinate plane to write a proof?

4. Write a coordinate proof to prove that \( \triangle ABC \) with vertices \( A(0, 0), B(6, 0) \), and \( C(3, 3\sqrt{3}) \) is an equilateral triangle.
12.8 Lesson

What You Will Learn

- Place figures in a coordinate plane.
- Write coordinate proofs.

Core Vocabulary

coordinate proof, p. 640

Placing Figures in a Coordinate Plane

A coordinate proof involves placing geometric figures in a coordinate plane. When you use variables to represent the coordinates of a figure in a coordinate proof, the results are true for all figures of that type.

Example 1  Placing a Figure in a Coordinate Plane

Place each figure in a coordinate plane in a way that is convenient for finding side lengths. Assign coordinates to each vertex.

a. a rectangle

b. a scalene triangle

Solution

It is easy to find lengths of horizontal and vertical segments and distances from (0, 0), so place one vertex at the origin and one or more sides on an axis.

a. Let $h$ represent the length and $k$ represent the width.

b. Notice that you need to use three different variables.

Monitoring Progress

Help in English and Spanish at BigIdeasMath.com

1. Show another way to place the rectangle in Example 1 part (a) that is convenient for finding side lengths. Assign new coordinates.

2. A square has vertices (0, 0), ($m$, 0), and (0, $m$). Find the fourth vertex.

Once a figure is placed in a coordinate plane, you may be able to prove statements about the figure.

Example 2  Writing a Plan for a Coordinate Proof

Write a plan to prove that $\overrightarrow{SO}$ bisects $\angle PSR$.

Given   Coordinates of vertices of $\triangle POS$ and $\triangle ROS$

Prove   $\overrightarrow{SO}$ bisects $\angle PSR$.

Solution

Plan for Proof  Use the Distance Formula to find the side lengths of $\triangle POS$ and $\triangle ROS$. Then use the SSS Congruence Theorem to show that $\triangle POS \cong \triangle ROS$. Finally, use the fact that corresponding parts of congruent triangles are congruent to conclude that $\angle PSO \cong \angle RSO$, which implies that $\overrightarrow{SO}$ bisects $\angle PSR$. 

640   Chapter 12   Congruent Triangles
3. Write a plan for the proof.

Given: \( \overrightarrow{GJ} \) bisects \( \angle OGH \).

Prove: \( \triangle GJO \cong \triangle GJH \)

The coordinate proof in Example 2 applies to a specific triangle. When you want to prove a statement about a more general set of figures, it is helpful to use variables as coordinates. For instance, you can use variable coordinates to duplicate the proof in Example 2. Once this is done, you can conclude that \( \overrightarrow{SO} \) bisects \( \angle PSR \) for any triangle whose coordinates fit the given pattern.

**EXAMPLE 3 Applying Variable Coordinates**

Place an isosceles right triangle in a coordinate plane. Then find the length of the hypotenuse and the coordinates of its midpoint \( M \).

**SOLUTION**

Place \( \triangle PQO \) with the right angle at the origin. Let the length of the legs be \( k \). Then the vertices are located at \( P(0, k) \), \( Q(k, 0) \), and \( O(0, 0) \).

Use the Distance Formula to find \( PQ \), the length of the hypotenuse.

\[
PQ = \sqrt{(k - 0)^2 + (0 - k)^2} = \sqrt{k^2 + (-k)^2} = \sqrt{k^2 + k^2} = \sqrt{2k^2}
\]

Use the Midpoint Formula to find the midpoint \( M \) of the hypotenuse.

\[
M \left( \frac{0 + k}{2}, \frac{k + 0}{2} \right) = M \left( \frac{k}{2}, \frac{k}{2} \right)
\]

So, the length of the hypotenuse is \( \sqrt{2k^2} \) and the midpoint of the hypotenuse is \( \left( \frac{k}{2}, \frac{k}{2} \right) \).

4. Graph the points \( O(0, 0) \), \( H(m, n) \), and \( J(m, 0) \). Is \( \triangle OGH \) a right triangle? Find the side lengths and the coordinates of the midpoint of each side.
Writing Coordinate Proofs

**EXAMPLE 4**  Writing a Coordinate Proof

Write a coordinate proof.

**Given**  Coordinates of vertices of quadrilateral OTUV

**Prove**  \( \triangle OTU \cong \triangle UVO \)

**SOLUTION**

Segments \( OV \) and \( UT \) have the same length.

\[
OV = |h - 0| = h \\
UT = |(m + h) - m| = h
\]

Horizontal segments \( UT \) and \( OV \) each have a slope of 0, which implies that they are parallel. Segment \( OU \) intersects \( UT \) and \( OV \) to form congruent alternate interior angles, \( \angle TUO \) and \( \angle VOU \). By the Reflexive Property of Congruence, \( OU \cong OU \).

\[\Box\]

So, you can apply the SAS Congruence Theorem to conclude that \( \triangle OTU \cong \triangle UVO \).

**EXAMPLE 5**  Writing a Coordinate Proof

You buy a tall, three-legged plant stand. When you place a plant on the stand, the stand appears to be unstable under the weight of the plant. The diagram at the right shows a coordinate plane superimposed on one pair of the plant stand’s legs. The legs are extended to form \( \triangle OBC \). Prove that \( \triangle OBC \) is a scalene triangle. Explain why the plant stand may be unstable.

**SOLUTION**

First, find the side lengths of \( \triangle OBC \).

\[
OB = \sqrt{(48 - 0)^2 + (12 - 0)^2} = \sqrt{2448} \approx 49.5 \\
BC = \sqrt{(18 - 12)^2 + (0 - 48)^2} = \sqrt{2340} \approx 48.4 \\
OC = |18 - 0| = 18
\]

\[\Box\]

Because \( \triangle OBC \) has no congruent sides, \( \triangle OBC \) is a scalene triangle by definition. The plant stand may be unstable because \( OB \) is longer than \( BC \), so the plant stand is leaning to the right.

**Monitoring Progress**

5. Write a coordinate proof.

**Given**  Coordinates of vertices of \( \triangle NPO \) and \( \triangle NMO \)

**Prove**  \( \triangle NPO \cong \triangle NMO \)
12.8 Exercises

**Vocabulary and Core Concept Check**

1. **VOCABULARY** How is a coordinate proof different from other types of proofs you have studied? How is it the same?

2. **WRITING** Explain why it is convenient to place a right triangle on the grid as shown when writing a coordinate proof.

**Monitoring Progress and Modeling with Mathematics**

In Exercises 3–6, place the figure in a coordinate plane in a convenient way. Assign coordinates to each vertex. Explain the advantages of your placement. (See Example 1.)

3. A right triangle with leg lengths of 3 units and 2 units
4. A square with a side length of 3 units
5. An isosceles right triangle with leg length \( p \)
6. A scalene triangle with one side length of 2 \( m \)

In Exercises 7 and 8, write a plan for the proof. (See Example 2.)

7. **Given** Coordinates of vertices of \( \triangle OPM \) and \( \triangle ONM \)
   **Prove** \( \triangle OPM \) and \( \triangle ONM \) are isosceles triangles.

8. **Given** \( G \) is the midpoint of \( HF \).
   **Prove** \( \triangle GHJ \equiv \triangle GFO \)

In Exercises 9–12, place the figure in a coordinate plane and find the indicated length.

9. A right triangle with leg lengths of 7 and 9 units; Find the length of the hypotenuse.
10. An isosceles triangle with a base length of 60 units and a height of 50 units; Find the length of one of the legs.
11. A rectangle with a length of 5 units and a width of 4 units; Find the length of the diagonal.
12. A square with side length \( n \); Find the length of the diagonal.

In Exercises 13 and 14, graph the triangle with the given vertices. Find the length and the slope of each side of the triangle. Then find the coordinates of the midpoint of each side. Is the triangle a right triangle? Isosceles? Explain. (Assume all variables are positive and \( m \neq n \).) (See Example 3.)

13. \( A(0, 0), B(h, h), C(2h, 0) \)
14. \( D(0, n), E(m, n), F(m, 0) \)

In Exercises 15 and 16, find the coordinates of any unlabeled vertices. Then find the indicated length(s).

15. Find \( ON \) and \( MN \).
16. Find \( OT \).
PROOF In Exercises 17 and 18, write a coordinate proof. (See Example 4.)

17. Given Coordinates of vertices of $\triangle DEC$ and $\triangle BOC$

Prove $\triangle DEC \cong \triangle BOC$

![Diagram](image)

18. Given Coordinates of $\triangle DEA$, $H$ is the midpoint of $DA$, $G$ is the midpoint of $EA$.

Prove $DG \equiv EH$

![Diagram](image)

19. MODELING WITH MATHEMATICS You and your cousin are camping in the woods. You hike to a point that is 500 meters east and 1200 meters north of the campsite. Your cousin hikes to a point that is 1000 meters east of the campsite. Use a coordinate proof to prove that the triangle formed by your position, your cousin’s position, and the campsite is isosceles. (See Example 5.)

![Diagram](image)

20. MAKING AN ARGUMENT Two friends see a drawing of quadrilateral $PQRS$ with vertices $P(0, 2)$, $Q(3, -4)$, $R(1, -5)$, and $S(-2, 1)$. One friend says the quadrilateral is a parallelogram but not a rectangle. The other friend says the quadrilateral is a rectangle. Which friend is correct? Use a coordinate proof to support your answer.

21. MATHEMATICAL CONNECTIONS Write an algebraic expression for the coordinates of each endpoint of a line segment whose midpoint is the origin.

22. REASONING The vertices of a parallelogram are $(w, 0), (0, v), (-w, 0), \text{and} (0, -v)$. What is the midpoint of the side in Quadrant III?

![Diagram](image)

23. REASONING A rectangle with a length of $3h$ and a width of $k$ has a vertex at $(-h, k)$. Which point cannot be a vertex of the rectangle?

![Diagram](image)

24. THOUGHT PROVOKING Choose one of the theorems you have encountered up to this point that you think would be easier to prove with a coordinate proof than with another type of proof. Explain your reasoning. Then write a coordinate proof.

25. CRITICAL THINKING The coordinates of a triangle are $(5d, -5d), (0, -5d), \text{and} (5d, 0)$. How should the coordinates be changed to make a coordinate proof easier to complete?

26. HOW DO YOU SEE IT? Without performing any calculations, how do you know that the diagonals of square $TUVW$ are perpendicular to each other? How can you use a similar diagram to show that the diagonals of any square are perpendicular to each other?

![Diagram](image)

27. PROOF Write a coordinate proof for each statement.

a. The midpoint of the hypotenuse of a right triangle is the same distance from each vertex of the triangle.

b. Any two congruent right isosceles triangles can be combined to form a single isosceles triangle.

28. $\overline{WY}$ bisects $\angle XYZ$ such that $m\angle YXW = (3x - 7)^\circ$ and $m\angle WYZ = (2x + 1)^\circ$. (Section 8.5)

29. Find the value of $x$.

29. Find $m\angle XYZ$.

Mathematical Practices

1. Write a simpler problem that is similar to Exercise 22 on page 623. Describe how to use the simpler problem to gain insight into the solution of the more complicated problem in Exercise 22.

2. Make a conjecture about the meaning of your solutions to Exercises 21–23 on page 631.

3. Identify at least two external resources that you could use to help you solve Exercise 20 on page 638.

Performance Task:

Congruence in Design

Why are the wings of a hang glider congruent? Is it necessary for performance or is it only for aesthetics? How can a designer prove that triangles are congruent?

To explore the answers to these questions and more, check out the Performance Task and Real-Life STEM video at BigIdeasMath.com.
12.1 Angles of Triangles  (pp. 587–594)

Classify the triangle by its sides and by measuring its angles.

The triangle does not have any congruent sides, so it is scalene. The measure of \( \angle B \) is 117°, so the triangle is obtuse.

The triangle is an obtuse scalene triangle.

1. Classify the triangle at the right by its sides and by measuring its angles.

Find the measure of the exterior angle.

2. \( \angle \text{ex} = 86° \)  

3. \( \angle \text{ex} = 9x + 9° \)

Find the measure of each acute angle.

4. \( \angle A = 8x° \)  

5. \( \angle A = 7x + 6° \)

12.2 Congruent Polygons  (pp. 595–600)

Write a congruence statement for the triangles. Identify all pairs of congruent corresponding parts.

The diagram indicates that \( \triangle ABC \equiv \triangle FED \).

Corresponding angles \( \angle A \equiv \angle F, \angle B \equiv \angle E, \angle C \equiv \angle D \)

Corresponding sides \( AB \equiv FE, BC \equiv ED, AC \equiv FD \)

6. In the diagram, \( \triangle GHJK \equiv \triangle LMNP \). Identify all pairs of congruent corresponding parts. Then write another congruence statement for the quadrilaterals.

7. Find \( m\angle V \).
12.3 Proving Triangle Congruence by SAS (pp. 601–606)

Write a proof.
Given \( \overline{AC} \cong \overline{EC}, \overline{BC} \cong \overline{DC} \)
Prove \( \triangle ABC \cong \triangle EDC \)

<table>
<thead>
<tr>
<th>STATEMENTS</th>
<th>REASONS</th>
</tr>
</thead>
<tbody>
<tr>
<td>1. ( \overline{AC} \cong \overline{EC} )</td>
<td>1. Given</td>

Decide whether enough information is given to prove that \( \triangle WXZ \cong \triangle YZX \) using the SAS Congruence Theorem. If so, write a proof. If not, explain why.

8. \( \triangle WXZ \) and \( \triangle YZX \)

9. \( \triangle WXZ \) and \( \triangle YZX \)

12.4 Equilateral and Isosceles Triangles (pp. 607–614)

In \( \triangle LMN, \overline{LM} \cong \overline{LN} \). Name two congruent angles.

\( \overline{LM} \cong \overline{LN} \), so by the Base Angles Theorem, \( \angle M \cong \angle N \).

Copy and complete the statement.
10. If \( \overline{QP} \cong \overline{QR} \), then \( \angle \_ \cong \angle \_ \).
11. If \( \angle TRV \cong \angle TVR \), then \( \_ \cong \_ \).
12. If \( \overline{RQ} \cong \overline{RS} \), then \( \angle \_ \cong \angle \_ \).
13. If \( \angle SRV \cong \angle SVR \), then \( \_ \cong \_ \).
14. Find the values of \( x \) and \( y \) in the diagram.
12.5 Proving Triangle Congruence by SSS (pp. 617–624)

Write a proof.
Given \( \overline{AD} \cong \overline{CB}, \overline{AB} \cong \overline{CD} \)
Prove \( \triangle ABD \cong \triangle CDB \)

<table>
<thead>
<tr>
<th>STATEMENTS</th>
<th>REASONS</th>
</tr>
</thead>
<tbody>
<tr>
<td>1. ( \overline{AD} \cong \overline{CB} )</td>

<tr>
<td>3. ( \angle ACB \cong \angle DCE )</td>
<td>3. Vertical Angles Congruence Theorem</td>
</tr>
<tr>
<td>4. ( \angle ABC \cong \angle DEC )</td>
<td>4. AAS Congruence Theorem</td>
</tr>
</tbody>
</table>
Decide whether enough information is given to prove that the triangles are congruent using the AAS Congruence Theorem. If so, write a proof. If not, explain why.

17. \( \triangle EFG, \triangle HJK \)  \hspace{1cm} 18. \( \triangle TUV, \triangle QRS \)

Decide whether enough information is given to prove that the triangles are congruent using the ASA Congruence Theorem. If so, write a proof. If not, explain why.

19. \( \triangle LPN, \triangle LMN \)  \hspace{1cm} 20. \( \triangle WXZ, \triangle YZX \)

12.7 Using Congruent Triangles  (pp. 633–638)

Explain how you can prove that \( \angle A \cong \angle D \).

If you can show that \( \triangle ABC \cong \triangle DCB \), then you will know that \( \angle A \cong \angle D \). You are given \( \overline{AC} \cong \overline{DB} \) and \( \angle ACB \cong \angle DCB \). You know that \( \overline{BC} \cong \overline{CB} \) by the Reflexive Property of Congruence. Two pairs of sides and their included angles are congruent, so by the SAS Congruence Theorem, \( \triangle ABC \cong \triangle DCB \).

Because corresponding parts of congruent triangles are congruent, \( \angle A \cong \angle D \).

21. Explain how to prove that \( \angle K \cong \angle N \).

22. Write a plan to prove that \( \angle 1 \cong \angle 2 \).
Write a coordinate proof.

**Given** Coordinates of vertices of $\triangle ODB$ and $\triangle BDC$

**Prove** $\triangle ODB \cong \triangle BDC$

Segments $\overline{OD}$ and $\overline{BD}$ have the same length.

\[
\overline{OD} = \sqrt{(j - 0)^2 + (j - 0)^2} = \sqrt{j^2 + j^2} = \sqrt{2j^2}
\]

\[
\overline{BD} = \sqrt{(j - 2j)^2 + (j - 0)^2} = \sqrt{(-j)^2 + j^2} = \sqrt{2j^2}
\]

Segments $\overline{DB}$ and $\overline{DC}$ have the same length.

\[
\overline{DB} = \overline{BD} = \sqrt{2j^2}
\]

\[
\overline{DC} = \sqrt{(2j - j)^2 + (2j - j)^2} = \sqrt{j^2 + j^2} = \sqrt{2j^2}
\]

Segments $\overline{OB}$ and $\overline{BC}$ have the same length.

\[
\overline{OB} = |2j - 0| = 2j
\]

\[
\overline{BC} = |2j - 0| = 2j
\]

So, you can apply the SSS Congruence Theorem to conclude that $\triangle ODB \cong \triangle BDC$.

23. Write a coordinate proof.

**Given** Coordinates of vertices of quadrilateral $OPQR$

**Prove** $\triangle OPQ \cong \triangle QRO$

24. Place an isosceles triangle in a coordinate plane in a way that is convenient for finding side lengths. Assign coordinates to each vertex.

25. A rectangle has vertices (0, 0), (2k, 0), and (0, k). Find the fourth vertex.
Write a proof.

1. Given $CA \cong CB \cong CD \cong CE$
   Prove $\triangle ABC \cong \triangle EDC$

2. Given $\overline{JK} \parallel \overline{ML}, \overline{MJ} \parallel \overline{KL}$
   Prove $\triangle MJK \cong \triangle KLM$

3. Given $\overline{QR} \cong \overline{RS}, \angle P \cong \angle T$
   Prove $\triangle SRP \cong \triangle QRT$

4. Find the measure of each acute angle in the figure at the right.

5. Is it possible to draw an equilateral triangle that is not equiangular? If so, provide an example. If not, explain why.

6. Can you use the Third Angles Theorem to prove that two triangles are congruent? Explain your reasoning.

Write a plan to prove that $\angle 1 \cong \angle 2$.

7. $A \qquad B$
   $\qquad C \quad D \quad E$

8. $R \quad S \quad T$
   $V \qquad W \quad X \quad Y$

9. Is there more than one theorem that could be used to prove that $\triangle ABD \cong \triangle CDB$? If so, list all possible theorems.

10. Write a coordinate proof to show that the triangles created by the keyboard stand are congruent.

11. The picture shows the Pyramid of Cestius, which is located in Rome, Italy. The measure of the base for the triangle shown is 100 Roman feet. The measures of the other two sides of the triangle are both 144 Roman feet.
   a. Classify the triangle shown by its sides.
   b. The measure of $\angle 3$ is $40^\circ$. What are the measures of $\angle 1$ and $\angle 2$? Explain your reasoning.
1. The graph of which inequality is shown?

- **A** \( x + 2y < 4 \)
- **B** \( x + 2y \leq 4 \)
- **C** \( x + 2y > 4 \)
- **D** \( x + 2y \geq 4 \)

2. Use the steps in the construction to explain how you know that the line through point \( P \) is parallel to line \( m \).

3. The coordinate plane shows \( \triangle JKL \) and \( \triangle XYZ \).

   a. Write a composition of transformations that maps \( \triangle JKL \) to \( \triangle XYZ \).
   
   b. Is the composition a congruence transformation? If so, identify all congruent corresponding parts.

4. Which two equations form a system of linear equations that has infinitely many solutions?

   \[
   x + 2y = 6 \quad 2x + y = 6 \quad 2x + 4y = 12 \quad x - 2y = -6
   \]
5. The coordinate plane shows $\triangle ABC$ and $\triangle DEF$.
   a. Prove $\triangle ABC \cong \triangle DEF$ using the given information.
   b. Describe the composition of rigid motions that maps $\triangle ABC$ to $\triangle DEF$.

6. Which figure(s) have rotational symmetry? Select all that apply.

7. Write a coordinate proof.
   Given Coordinates of vertices of quadrilateral $ABCD$
   Prove Quadrilateral $ABCD$ is a rectangle.

8. Write a proof to verify that the construction of the equilateral triangle shown below is valid.
   Step 1  Step 2  Step 3  Step 4
